

1 reason, you don't see the bar and I have said over and
2 over when I talk to people and groups that as our
3 country is become more diverse -- we've got so much
4 making up to do. I mean, in so many states African
5 Americans and Latinos couldn't go to law school for
6 years and years. So, the number of -- in Georgia and
7 Mississippi, and Alabama, it doesn't have but about
8 250 African American lawyers in the whole state.

9 So, you have a fairly small number of
10 people to begin with and now the law school classes
11 aren't reflecting the population and are going down
12 even further. So, that's going to be even worse. And
13 I think one of the arguments that has to be made, and
14 that I hope will convince people, is that our courts
15 are just not going to be seen as legitimate if they
16 don't represent the community any better than that. I
17 think the courts are out of touch, very much out of
18 touch with a lot of things, culturally and so forth.

19 When Robert Breenan was appointed to the
20 Georgia Supreme Court, the first African American, and
21 told this story about going in a paint store and
22 somebody saying, boy, bring me the paint, I don't

1 think the other members of that court had ever had --
2 probably ever had anybody tell them a story like that
3 before. And here one of their colleagues had. I
4 think that's the value of that that sort of pluralism
5 has on a bench that has never had it before. But
6 they're awful lot of courts where you don't have that.

7 And one of the things I'd just like to
8 pick up on that I thought was a very insightful
9 comment that Chief Monroe made, which is he talked
10 about how demagoguery leads to the way in which people
11 behave and the line people behave. I think one of the
12 problems is in the D.C. Police, they may be giving
13 good talks to the officers. Btu out in the places
14 where I am, a little bit different, the demagoguery is
15 coming from the politicians, from President Clinton,
16 from the candidates for everything from sheriff on up,
17 all talking about we're fighting a war on crime, a war
18 on crime. We've got to get tough. That the police
19 are the soldiers in this war on crime. And the result
20 is that you've got this sort of war mentality that
21 anything goes. We've got all these paramilitary units
22 that --

1 And I'll tell you, it's not just the poor
2 people. One of the people in my office at one time,
3 now is head of another office, but Brian Stevenson, a
4 graduate of the Harvard Law School and Kennedy School
5 of Government, comes back from the library one night
6 and the tactical squad surrounds him with all their
7 guns drawn, puts him on the front of the car, searches
8 him. Holds him there for 20 minutes. Humiliates him
9 while all his neighbors are walking up and down the
10 street. Hadn't done a thing wrong. Has just simply
11 come back to the house that he lived in from the
12 library.

13 And I think when you have that lack of
14 leadership from the political leaders in this country
15 urging people on that we're fighting this war and
16 we're on the front lines, and all that, and not taking
17 into account that we've got to worry about the fact
18 that we have sacrificed fairness in our court system.
19 We've sacrificed the 4th Amendment on the streets,
20 the right to be free of unreasonable search and
21 seizures. And that we're paying a terrible price for
22 this war on crime.

1 And I think it's one of the things that
2 has deterred trying to change the court system.
3 Because I think part of the argument that's made is
4 that the more diversity on the courts, the courts will
5 be soft on crime. And I think that's a terrible
6 problem.

7 VICE CHAIRPERSON REYNOSO: Thank you very
8 much.

9 Sorry to have taken so long, Madam Chair.

10 CHAIRPERSON BERRY: That's all right.

11 Commissioner Lee.

12 COMMISSIONER LEE: I also have several
13 questions but because of time I will limit myself.

14 The first question is to Assistant Chief
15 Monroe. You mentioned the -- one aspect of building
16 or establishing police community relations is to build
17 bridges. Can you share with us some of the approaches
18 that you have made that's successful? And also, I'd
19 like you to comment on your views, whether -- you
20 talked about the importance of ongoing training,
21 officer training, culturally, sensitivity training,
22 and what have you. How does that compare to having a

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS
1323 RHODE ISLAND AVE., N.W.
WASHINGTON, D.C. 20005-3701

1 department that reflects the make up of the community
2 that the department is supposed to serve?

3 ASST. CHIEF MONROE: I think it is
4 important that the demographics of the department
5 roughly correlate with the demographics of the
6 community at large. But I think as important as the
7 racial and gender balances that you need, it's the
8 state of mind.

9 In policing, many of the attitudes in
10 policing are passed down from generation to generation
11 of police officers. Example. I came on the police
12 department in 1979. Many of the officers, the older
13 officers, who trained me came into that agency in
14 1960, 1970. So they're -- and the people who trained
15 them came on in the '40s and '50s. So, it's easy to
16 see how many of the attitudes that they would have and
17 the way that the police respond to the community, and
18 particularly minority communities, are passed on. So,
19 some of these things become ingrained into the
20 policing -- to the methods and philosophies of
21 policing itself where you can have a person, either of
22 African American descent or Latino descent, come into

1 this agency, or, when I say this agency, come into
2 this industry. And they will be acting in a way, and
3 based on some stereotypes that were formed 25 or 30
4 years prior to that. It's just -- it's a matter of
5 exposure to different ways of thinking. And we tend
6 to be kind of closed.

7 I think that's as important as the
8 demographics. I always say, a good police officer is
9 a good police officer regardless of the race. And a
10 bad one, if you run into one, I don't particularly
11 care that if I run into an African American police
12 officer who is a bad police officer, he can make me
13 have a very bad day.

14 I think, and I want to digress for just
15 one moment, to what Mr. Bright was saying. And I
16 think it's very, very important that law enforcement
17 and the criminal justice system does not lose its
18 legitimacy because it isn't diverse and it isn't
19 sensitive to larger issues. Because at that point, we
20 have anarchy because people stop respecting the rule
21 of law because they believe it's unfair and I'm not
22 going to get an equal shake anyway. So, I think it's

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS
1323 RHODE ISLAND AVE., N.W.
WASHINGTON, D.C. 20005-3701

1 critical that we do that.

2 Some of the things we've done is, from
3 just my own personal experiences, I try to talk to
4 young people. And right now in the 4th District,
5 which is one of the districts in my region, the
6 commanding officer there, Melvin Scott, has
7 implemented a program where we go out and we talk to--
8 we bring at risk children in from the halfway houses.

9 In fact, they are very at risk and some of them have
10 committed what would be felonies if they were adults.

11 But we try to talk to them about the wider
12 issues of what they're going to do with their life.
13 And we explain to them about the criminal justice
14 system.

15 I want to -- Just one moment. We talked
16 to a group of, I think, maybe 12 young men. They were
17 from 13 to 19. And we were talking about the rights
18 that they had and what police officers use as a
19 standard to stop them. So, we were trying to explain
20 a Terry Stop to teenagers. So, we began talking about
21 the Bill of Rights. And we talked about the 4th, 5th,
22 and 6th Amendment. And as we were talking to them, it

1 became kind of clear that the lights weren't going
2 off. So, I asked them, how many people knew about the
3 Bill of Rights and no hands went up. I asked them how
4 many people understood the Constitution. No hands
5 went up. I asked how many people know that there is a
6 thing called the Constitution. No hands went up.

7 I think what Mr. Pierce said when there is
8 a problem with the -- these are things that you learn
9 in second grade. You may not know all about the
10 Constitution but you know there was a thing called the
11 Constitution. If we're going to have a weak education
12 system, anything we do is not going to help.

13 So, what we try to do is we try to -- and
14 in talking to these young men, after the -- I mean,
15 you should have seen the look on their face in a
16 police station talking to police executives. But once
17 we were able to get through that we're not here to
18 harm you. We're only here out of concern for you, a
19 lot of those young men began to soften their signs.

20 They take on the culture of the community
21 that we put them in. If we push them out, and that's
22 what we tend to do, if we push them out of our

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

(202) 234-4433

www.nealrgross.com

1 community, we're going to push them into that
2 community that's going to wait for them with open arms
3 in a prison. So, what we try to do is keep as many of
4 them out of the system as possible with the
5 understanding that some -- no net is going to catch
6 all fish. If it catches sardines, it's not going to
7 do much for a whale and visa versa.

8 So, I think we as a society just have to
9 come up with different sets of nets and not try to --
10 we try to have catch alls.

11 MR. PIERCE: Excuse me, Madam Chairwoman,
12 may I be excused for just a moment to call my office,
13 please.

14 CHAIRPERSON BERRY: You are coming back
15 because I have a question for you.

16 MR. PIERCE: Yes, Ma'am. Yes, Ma'am.

17 CHAIRPERSON BERRY: Don't be gone too
18 long.

19 MR. PIERCE: No, Ma'am. Thank you.

20 CHAIRPERSON BERRY: Go ahead, Yvonne. Did
21 you want to ask --

22 COMMISSIONER LEE: And the second question

1 is to Mr. Bright.

2 According to the materials that we've
3 received, another cause for the disparity or over
4 representation of African American males in the other
5 end of the criminal justice system is unequal
6 representation in defense. Since the Vice Chair has
7 mentioned about the aftermath of affirmative action,
8 the dismantling of affirmative action programs, what
9 would you suggest, what kind of programs would you
10 suggest to assure that there will be better defense
11 representation of minorities, specifically African
12 American male,s in the criminal justice system?

13 MR. BRIGHT: Well, I'm glad you asked.
14 That was one of the things I meant to talk about
15 because that's a tremendous problem.

16 When I said the lawyers, actually one of
17 the -- in my piece here, I described a lawyer who was
18 a -- if I can find it real quick I'll share it with
19 you -- who was appointed to defend a capital case.
20 And this is the federal judge, the trial attorney, he
21 said was outspoken about his views. He said the
22 blacks were uneducated and wouldn't make good teachers

1 but make good basketball players. He said blacks are
2 less educated and less intelligent than whites because
3 his granddaddy has slaves. He said that integration
4 had lead to deterioration of neighborhoods and he
5 described Chattanooga as a "black boy jungle." He
6 says that he uses the word nigger jokingly.

7 This is the man who was responsible for
8 seeing that an African American facing the death
9 penalty received a fair trial and that the jury knew
10 everything about the life and background of that
11 person. And that was upheld by the court. They said
12 that was not race discrimination. I mean, that's,
13 again, how far McCluskey has taken us.

14 But in so many states, you know, there's
15 not even an indigent defense system. One of the
16 things our office has been very concerned about is the
17 fact that a lot of counties, particularly in the rural
18 areas, bid the indigent defense out to the lowest
19 bidder. And so, the county will just simply say,
20 anybody who's a member of the bar can bid on the
21 contract and then they'll take the lowest bidder with
22 no qualifications about the quality factored in at

1 all.

2 And then the -- I was not long ago in
3 Thompson, Georgia just watching a whole day of court.
4 And generally, the appointed lawyer, who was white,
5 and was a lawyer who I think anybody in that community
6 would admit was doing that job because it was the only
7 work he could do. Nobody would hire him to do any
8 other kind of legal work. Obviously disdainful of his
9 clients. I mean, clearly didn't like the people that
10 he was representing. Often made snide remarks about
11 them in open court for everybody to hear.

12 But what was most striking about it is
13 that he would most often meet his client for the first
14 time in open court. And after a few whispered
15 conversations, he would enter a guilty plea on their
16 behalf and they'd be sentenced. And the most dramatic
17 moment, I guess, of the day was when one person, the
18 judge, after -- before -- after taking the guilty plea
19 but before sentencing, asked him if he had anything to
20 say and he just plead guilty to leaving the scene of
21 an accident and driving under the influence. And he
22 said, well, Judge, I just want you to know, I did

1 leave the scene, but I didn't have anything to drink
2 until I got home. And at that point, his lawyer
3 exclaimed, the most surprised person in the courtroom,
4 why, my gosh, Your Honor, he's innocent. I mean, this
5 is after he had just plead the man guilty.

6 And this, we see over and over. We have
7 to have -- an answer to your question is, we have to
8 realize that we're pouring huge amounts of money into
9 the prosecution. Every time they pass a crime bill,
10 huge amounts of money, setting up drug courts, setting
11 up domestic violence courts, all these things which
12 are wonderful. But no money on the other side for the
13 defense function. And the result of that is that
14 indigent defense systems that were already years ago
15 overwhelmed and couldn't possibly keep up are even
16 more overwhelmed today.

17 And what's needed is to say that we can be
18 tough on crime but we can be fair. And we've got to
19 have public defender systems. We've got to-- just
20 like we have on the prosecution side, a group of
21 people that specialize in prosecuting these cases,
22 we've got to have a group of people on the other side

1 that specializes in defending these cases. And we
2 also have to have people that are independent of the
3 judges and independent of these monetary constraints
4 so you actually have people representing people that
5 have the best interest of their client at heart and
6 aren't just simply being appointed to these cases to
7 expedite the cases through the system.

8 I mean, the judges in Houston, Texas
9 appoint repeatedly a lawyer who has slept through two
10 capital trials that he was defending. These judges
11 didn't just preside over these cases. They appointed
12 the lawyer and they appointed him again. And that's
13 all they do, is appoint him. Those are the only cases
14 he gets.

15 The judges shouldn't be charge of deciding
16 who represents a poor person. Because I remember a
17 young man named Gregory Wilson in Kentucky who is on
18 death row there now who, when he realized that his
19 lawyer was an alcoholic, didn't have an office,
20 practiced out of a home where there was a Budweiser
21 beer sign over his desk, and after the lawyer had
22 given him number and he called the number and they

WASHINGTON, D.C. 20005-3701

(202) 234-4433

www.nealrgross.com

1 answered Kelly's Keg, and it was a bar in COvington.
2 And you'd call and the bartender would summon the
3 lawyer to the phone, and the young man went before the
4 judge. I mean, this would be funny if it weren't so
5 tragic. The young man went before the judge and he
6 said, Your Honor, I want a lawyer. I'm facing the
7 death penalty. I want a lawyer. And the judge said,
8 be my guest. If you can find a lawyer, that's fine.
9 But this is the lawyer the court is giving you. And
10 that young man went to trial with that sort of
11 farcical representation. And the Kentucky Supreme
12 Court said on appeal that it wasn't an ineffective
13 assistance of counsel. That he didn't cooperate with
14 the lawyer.

15 COMMISSIONER LEE: Well, do you think
16 there should be some kind of an ombudsman program or
17 oversight department to monitor these things?

18 MR. BRIGHT: I think what there needs to
19 be -- I think the problem is so obvious, I don't think
20 we need to study it any more. I think we need to do
21 something about it. I think we need programs that
22 will provide representation to people accused of

1 crimes so we don't -- another case in Georgia where
2 the third day of trial they found out that the wrong
3 defendant was on trial. And the lawyer knew his
4 client so little that he said, well, the guy kept
5 saying it's not me, it's not me, but I thought he
6 meant he was innocent. And it was literally the wrong
7 person on trial. I mean, that's not a system of
8 indigent defense.

9 And I think what needs to be done is to
10 say that we've got to -- Gideon v. Wainwright, the
11 case that said that every person accused of a crime
12 was entitled to a lawyer was decided 36 years ago.
13 And there has been the same resistance to that that
14 there have been to a lot of other Supreme Court
15 decisions and we need to enforce the Gideon decision.

16 And we need to enforce it with a structure, an
17 independent, funded structure that will provide legal
18 representation for people.

19 CHAIRPERSON BERRY: All right. I have a
20 couple of question. I have more but in the interest
21 of time, since we've decided not have the break.
22 We're just going to proceed since we had a break

1 earlier, and I need to ask these questions.

2 The first thing I want to say is that with
3 reference to the statements made by Mr. Pierce about
4 education and about desegregation. I'm not aware that
5 any major school desegregation litigation, bringing
6 new cases, has taken place in the last 20 years. Most
7 of what's happened in school desegregation in the last
8 20 years is people either getting out of school
9 desegregation orders or people abandoning
10 desegregation orders, and the resegregation of the
11 schools.

12 So that whatever is wrong with the public
13 schools right now is not because anybody's trying to
14 desegregate them. Because I don't know anybody who's
15 trying to do that. And it hasn't been done, if we
16 think about it historically. We're talking about
17 almost 20 years. So, this is not a fight that, if I'm
18 right about that, this is not a fight that we have to
19 get people to stop trying to desegregate schools
20 because they're not trying to desegregate them.

21 The -- And they also, it is -- it occurs
22 to me that in the 20 years that the kind of lack of

1 diversity in the courts that Mr. Bright was talking
2 about, and I happen to have written about in a book I
3 just published. I'm not trying to sell it but it's
4 called A Pig Farmer's Daughter and it's about state
5 supreme courts and the lack of diversity. The lack of
6 diversity in all of our institutions, and in
7 particular in the justice system, and these attitudes
8 that he's talking about, have festered. And in fact,
9 we've become more polarized in the 20 years since we
10 stopped trying to desegregate the schools.

11 And it makes you wonder if we have become
12 more separate and we are having more diversity in
13 terms of demography and the people who are immigrating
14 into the country and the various populations, and we
15 talk about diversity as our strength and all that. We
16 make speeches about it when in fact the courts are the
17 way Mr. Bright described them. The prosecutors are
18 the way, everybody in the whole system looks that way.

19 And more important, has perspectives. Because you
20 can have black faces with perspectives that are just
21 like other faces. So, it's not just the faces. It's
22 the stories and the perspectives.

1 Could it be that you can have the pursuit
2 of quality education and an effort to try to have more
3 people interact racially? And could that have some
4 impact on what happens in other sectors or societies,
5 including the courts? I ask you that first. And then
6 I'll ask you a question about the single sex schools.
7 Go ahead.

8 MR. PIERCE: In answer to your first
9 question, yes, I do believe that. And I hope my
10 comments earlier weren't received as saying that the
11 country was still caught up in desegregation. I
12 didn't say that. That wasn't what I mean, Madam
13 Chairwoman.

14 My comment was that --

15 CHAIRPERSON BERRY: Am I right about that,
16 that there's no major --

17 MR. PIERCE: You're absolutely right.
18 There's no -- no one is bringing desegregation cases.
19 On my docket there are very few. The cases that are
20 rising are resource equity or resource comparability
21 limiting proficiency testing, the over representation
22 of minority students in special education, under

1 representation in gifted and talented programs. The
2 whole ability grouping, you know this information now.
3 Racial harassment.

4 CHAIRPERSON BERRY: Right. But not
5 desegregation.

6 MR. PIERCE: But not desegregation.

7 But if you were to ask anyone 10, 15, as
8 recently as ten years ago, and definitely for the 40
9 years prior to that, 35 years prior to that, what was
10 the plan for quality education for African Americans,
11 it was desegregation. And my comment was that
12 unfortunately too many of school districts, and I say
13 unfortunately, due to the recalcitrants and hostility
14 towards desegregation, got caught up in the
15 desegregation. And somehow the focus on sound, solid
16 education, removing educational disparities, was lost.

17 I sincerely believe that.

18 CHAIRPERSON BERRY: My only point is that
19 you give people an excuse for not having imposed
20 quality education in their school system by letting
21 them hide behind the argument that we were focused all
22 these years on trying to desegregate.

1 MR. PIERCE: Yes. Yes.

2 CHAIRPERSON BERRY: That's why we couldn't
3 do anything. When we know for a matter of a fact that
4 black majority and Latino majority school districts
5 that we call racially isolated, have existed for
6 almost 20 years. And people who have been running
7 them have in part been Latinos and African Americans
8 who have been running them. And no one was trying to
9 desegregate them. So that's not an excuse.

10 So, I think that when we emphasize that,
11 we give them an excuse for not having focused until
12 now on that. And we need to urge them to stop hiding
13 behind that.

14 MR. PIERCE: I agree totally.

15 CHAIRPERSON BERRY: All right.

16 MR. PIERCE: In fact, what we often say is
17 excellence and equity go hand in hand. Too often folk
18 believe that you can't have equity without dummyping
19 down excellence. But, the reality is you can't say
20 you have an excellent schools system if it is
21 inequitable by any factors that you want to put up.
22 In this particular sense, civil rights sense, by

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS
1323 RHODE ISLAND AVE., N.W.
WASHINGTON, D.C. 20005-3701

1 gender, race, or whatever, national origin,
2 disability. We know that.

3 Let me make this comment and I have to say
4 this. When you were talking -- you made your comment
5 about who was running our school system and who
6 continues to run our school system. It goes back to
7 my other comment.

8 The bottom line issue as far as Raymond
9 Pierce is concerned is accountability. I asked Dr.
10 Asa Hilliard once, and I'm sure you know who Asa
11 Hilliard is. I said one day in a moment of despair
12 dealing with these civil rights issues around this
13 nation. I said, Asa, what is it? And he said, you
14 know, Raymond, people think there's some big mystery
15 to educating black children and it's not. He said,
16 you set high standards. You put somebody in charge.
17 You held them accountable. And if they don't do their
18 job, get rid of them and get somebody who can.

19 And unfortunately we have not done that.
20 And we are starting to move now towards putting people
21 in charge, setting high standards, giving them the
22 resources to do their job, and holding them

1 accountable. And if they can't do it, get rid of them
2 and get somebody who can. That's what Ford Motor
3 Company does. That's what Chrysler Company does.
4 That's what any company does. If you don't produce,
5 move on.

6 In this particular situation, the
7 production is the education of our children. And we
8 have to begin to look at it in the business sense and
9 begin to put together school reform packages that will
10 do that. With, of course, all the removal of all the
11 inequities that we know continue to exist.

12 And I personally believe that can be done
13 in Detroit, Washington, D.C., Cleveland, Baltimore,
14 Atlanta, Jackson, Mississippi, so forth, so on. And I
15 personally believe if you do that and you build a
16 quality education system, the integration will follow.

17 Because white folk and anybody else will want to go
18 where the best education is. And that's -- anybody,
19 black folks, want the best education for their child.

20 I have two children. My wife and I had
21 our son in a private school. I work for the United
22 States Department of Education. I'm thinking, hey,

1 wait a minute, I ought to consider a public school.
2 But I want the best for my son. We shopped around.
3 My son is not going to the school that by district he
4 should go to. He's going to the school that we picked
5 because I interviewed the principal and that's where I
6 want him, because that's my son.

7 We have to begin to do the same thing for
8 parents who can't navigate the system like I -- like
9 many of us can.

10 CHAIRPERSON BERRY: So, you mean the
11 Department of Education is in favor of choice in
12 public education and in favor of private school
13 choice? Is that the position of the Department?

14 MR. PIERCE: No, Chairwoman, I did not say
15 that.

16 CHAIRPERSON BERRY: Oh, I just --

17 MR. PIERCE: You know I didn't say that,
18 Madam Chairwoman and you know our position.

19 CHAIRPERSON BERRY: I didn't know that so
20 I just thought I'd ask while you were here.

21 MR. PIERCE: You know I didn't say that,
22 Madam Chairwoman.

1 CHAIRPERSON BERRY: Let me ask you another
2 one. Let me move along and let me ask you another one
3 real quick.

4 The Vice Chair referred to a complaint
5 filed in California about the absence of Latinos and
6 African Americans in the law school. And I think that
7 complaint was probably filed with the Department of
8 Education since you have Title VI responsibility. Are
9 you aware of that complaint and what -- did it get
10 lost, or what happened to it?

11 MR. PIERCE: No ma'am, it's my complaint.
12 It's on my desk.

13 VICE CHAIRPERSON REYNOSO: Oh, I'm talking
14 to the right person here.

15 CHAIRPERSON BERRY: Yes, the check is in
16 the mail.

17 MR. PIERCE: No, Madam Chairwoman, the
18 complaint, more specifically, the complaint alleged
19 that the -- it's not a complaint that alleges that
20 Proposition 209 discriminates or that the racial
21 disparity is a discrimination on the basis of race or
22 national origin.

1 The complaint is a Title VI complaint that
2 says that the current admission formula and the
3 University of California system of higher education
4 discriminates on the basis of race. And we're talking
5 particularly the law schools now. That their
6 admissions formula has a discriminatory impact.

7 VICE CHAIRPERSON REYNOSO: There may be
8 two complaints. I read the complaint filed against
9 UCLA some time ago and I don't recall that it quite
10 read that way.

11 MR. PIERCE: Well, that's the complaint
12 we're investigating, sir. And --

13 CHAIRPERSON BERRY: You're investigating?

14 MR. PIERCE: Yes.

15 CHAIRPERSON BERRY: I just wanted to make
16 sure I heard you.

17 MR. PIERCE: We're investigating, ma'am.

18 CHAIRPERSON BERRY: Okay. Because this --

19 MR. PIERCE: Poured a lot of money and
20 resources into it.

21 CHAIRPERSON BERRY: So, this has to do in
22 terms of the pipeline with the opportunities for young

1 African American males and others to go on to graduate
2 professional education, higher education. That's why
3 I'm asking you the question in the context of this
4 hearing.

5 MR. PIERCE: Yes. Yes. Yes.

6 CHAIRPERSON BERRY: The other thing I
7 wanted to ask, about single sex schools real fast.
8 You discussed that. Is there research insofar as the
9 Department of Education knows that shows that male and
10 female children have greater educational attainment if
11 they are in single sex schools than if they are in co-
12 educational schools as a matter of the research
13 conclusions that are reached?

14 MR. PIERCE: Madam Chairwoman, the
15 department commented on a report a few years ago by
16 the GAO, the Government Accounting Office, on that
17 very subject.

18 CHAIRPERSON BERRY: Yes?

19 MR. PIERCE: And we could make sure you
20 get copies of that.

21 CHAIRPERSON BERRY: I'd like to have a
22 copy. I could get one. But I just -- Are you aware

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS
1323 RHODE ISLAND AVE., N.W.
WASHINGTON, D.C. 20005-3701

1 --

2 MR. PIERCE: Oh, yes.

3 CHAIRPERSON BERRY: Is it your position
4 that male and female children will learn and have
5 greater educational attainment if they are educated in
6 single sex schools as opposed to co-educationally?

7 MR. PIERCE: Let me give you the
8 Department's position, Madam Chairwoman. Let me give
9 you mine as a parent. And a black man parent.

10 The Department's position is that the
11 research is mixed. It is. Works some places. It may
12 not work in other places.

13 But then let me go to the point where you
14 asked before, where you pushed me on the part of
15 choice. I believe a school district ought to have the
16 opportunity to provide that choice to parents.
17 Because in some school districts, they will argue
18 quite frankly, and strongly, that there is a benefit,
19 particularly for minority males and particularly for
20 white girls. That's what I meant by the gender equity
21 issues not being the same across lines.

22 If you look at the models of single sex

1 education across this country, a single sex education
2 in a white community is being pushed for girls because
3 girls seem to fall out when the boys are raising their
4 hands in the science class and the teacher is more
5 likely to call upon the males. But if you look in the
6 black community and where single sex education is
7 pushed most, it's for black males. Because African
8 American males seem to be falling out the most,
9 particularly around the fourth grade when instruction
10 becomes more of a lecture as opposed to interaction.

11 All I'm saying is that on the issue of
12 choice, if there is a demand for that, if there is a
13 feeling that somehow that might produce some
14 improvement, and the Detroit experience is beginning
15 to show huge academic achievement levels, improvement
16 levels, for African American males who have gone
17 through that academy over the years, then why not.
18 That is -- choice.

19 When I talk about choice, providing
20 options, a smorgasbord, a cafeteria, for parents for
21 their particular choosing for their child. So--

22 CHAIRPERSON BERRY: Well, if it could be

1 shown that children will have greater educational
2 attainment if they are in single sex schools as a
3 matter of research conclusions, then it would be
4 inimical to their success and discriminatory against
5 them for the Department not to tell school districts
6 that they ought to educate them optimally to the
7 extent that they get any federal money in schools that
8 would educate them well. Why choose a pattern of
9 education for a child that you know won't work for
10 them.

11 So, that's why I asked you whether the
12 research showed that. The other thing I wanted to say
13 very quickly is my understanding is that as far as the
14 law is concerned, is that if you could show that in
15 fact children learned better in single sex settings,
16 and if you could show that there was no racial bias
17 involved, so it's not a race issue, and if you could
18 show that all you're doing is teaching them so they
19 learn better, then it's not a gender issue. All
20 you're doing is teaching them so that they learn
21 better based on what the research is. And if you
22 could show that the education was not imposing

1 stereotypes and that you were trying to remove them in
2 the education, even in the single setting, that you
3 were not reinforcing stereotypes that end up with
4 gender inequity, that in fact since the standard for
5 scrutiny decisions concerning sex is lower than the
6 threshold for race, that that might be a way that you
7 could look at.

8 So, I think the key to it is probably the
9 research. So, I look forward to you sending me the--

10 MR. PIERCE: The GAO report.

11 CHAIRPERSON BERRY: -- copy of the report
12 cited to us and we will get.

13 The last question I have is to ask Mr.
14 Bright -- well, to ask the Chief, and Mr. Wilson,
15 whether they -- what do you think about asking young
16 black boys to learn to walk around with their palms
17 open so that the police will know that they don't have
18 a weapon and to just routinely do that as a mode and
19 manner which I understand from the media some police
20 officers in New York who go out to schools and so on
21 are telling kids that they ought to do that in order
22 to keep themselves from being abused by the police.

1 What do you think of that?

2 ASST. CHIEF MONROE: I don't think that's
3 acceptable. I think sometimes in a society and if we
4 go back through history, people often asked to give up
5 their rights because of fear and what have you.

6 Now, what I try and what I think our
7 agency tries to do when we talk to young black men,
8 anyone, about how to handle an encounter with the
9 police officer is to understand that when a police
10 officer pops those lights on, you are going to become
11 a little anxious. And what we try to do is point out
12 what the police officer's concerns are so young people
13 will understand that the officers are as concerned for
14 their own safety, so they don't do some of the things
15 that would cause an officer to become very anxious.
16 You don't stick your hands over into your coat or
17 whatever.

18 But as far as walking around, I can't
19 imagine a police officer telling anybody to walk
20 around having to show your hands all the time so an
21 officer will feel comfortable with you.

22 CHAIRPERSON BERRY: But you do think it's

1 appropriate to teach young boys, or anyone, to when
2 they see a police officer, they should not put their
3 hands in their pockets?

4 ASST. CHIEF MONROE: Yes. And when I say
5 that, it's only -- it's not so much that you teach
6 them not to, it's that you give them the police
7 officer's perspective. And when you talk to young
8 guys who are in the street and you give them the
9 police officer's perspective, I've never had one of
10 them who didn't say, I understand. It's just that I
11 explain to them that a police officer is normally
12 approaching a situation that they don't know anything
13 about and they are concerned. They are -- we are
14 concerned about our own safety.

15 So, when you are interacting with a person
16 who is concerned with their safety, I always reverse
17 the roles. I reverse the roles and ask them to take
18 on the role of police officer and ask them what they
19 think is reasonable. And I have yet to have one who
20 tells me that they don't think it's reasonable to be
21 careful in making very fast movements. That's all.

22 But again, I don't think we serve policing

1 well, or society well, when we tell young people that
2 when -- I forget the street slang they use, but the
3 drill. I don't think it's appropriate for us to tell
4 young people you know what the drill is.

5 CHAIRPERSON BERRY: What do you think, Mr.
6 Jackson, about all this?

7 MR. JACKSON: I agree with the Chief. It
8 just seems to me that that --

9 CHAIRPERSON BERRY: How about the palms
10 open? What do you think about that? Hands in the
11 pockets, what do you think about that?

12 MR. JACKSON: That type of advice is
13 indeed an acknowledgment that there is a presumption
14 of criminality. And it places the young black male on
15 the defensive.

16 CHAIRPERSON BERRY: But he distinguished
17 between hand -- palms open and hands in pockets. Do
18 you distinguish between those and that it's okay to
19 tell people not to put their hands in their pockets?

20 MR. JACKSON: Yes, I do see a distinction
21 there. Because, as the Chief said, I think there has
22 to be some understanding on both sides, frankly. I

1 think that one of the things that many traditional law
2 enforcement groups are now doing is reaching out to
3 the law enforcement agencies, law enforcement
4 organizations such as PERF, International Association
5 of Police Chiefs, ENOBLE, and others, that are working
6 very hard with traditional civil rights agencies to
7 sort of bridge that gulf of misunderstanding often.
8 And coming up with some ways to, again, build the
9 level of understanding and trust among those two
10 communities. But again, it troubles me greatly that
11 we again sort of shift that burden to the young black
12 males to demonstrate that you are not dangerous when I
13 come on to a scene.

14 CHAIRPERSON BERRY: Well, we'll have to
15 ask one of our other panels what impact it has on the
16 psyche and the attitudes of young black men to be told
17 to do these things.

18 But, Mr. Bright, what do you think about
19 the hands in your pockets and your palms -- this is my
20 last question. What do you think about telling young
21 black men to either keep their palms open or when they
22 see a police officer, make sure they don't put their

1 hands in their pocket or make any quick moves,
2 whatever that is.

3 MR. BRIGHT: Well, I've also had black men
4 tell me, dressed in suits, that they won't use their
5 cell phones for fear that reaching in their pocket
6 will result -- this is not when they're being
7 approached by the police or whatever, but just when
8 they're in a place where they think that might happen.

9 And I think the fact that any group has to be singled
10 out to be told those things is tragic.

11 And I just want to add this. In a lot of
12 communities -- I mean, I think what happens in
13 DETroit, and Washington, and some other communities
14 where you have a large African American constituency,
15 and where you have a more enlightened leadership, I
16 would just urge the commission to look beyond the
17 borders, even though they're obviously many problems,
18 as New York and other places show.

19 But I will tell you that in a lot of
20 communities in the south, the police are viewed as an
21 army of occupation. And that if you go to Montgomery,
22 Alabama and see -- I'm scared to death when I see the

1 police in Montgomery, Alabama. And I can just imagine
2 what a young African American man, or Cobb County,
3 Georgia. We had a young man who is now a lawyer, but
4 he was an investigator with our office who for reasons
5 unknown to me decided to live in Cobb County. And he
6 was stopped once or twice a week on his way to work by
7 the police. He would always be let go but he was
8 being stopped all the time.

9 CHAIRPERSON BERRY: Are young white boys,
10 to your knowledge, taught to not make any quick moves
11 and to not put their hand in their pocket when they
12 see a police officer?

13 MR. BRIGHT: No ma'am. And I think many--

14 CHAIRPERSON BERRY: And do you think they
15 should be?

16 MR. BRIGHT: And I think many of them, it
17 doesn't even cross their mind.

18 CHAIRPERSON BERRY: Oh, okay.

19 MR. BRIGHT: That they're going to be
20 stopped like that.

21 CHAIRPERSON BERRY: All right.

22 Yes. Yes.

1 ASST. CHIEF MONROE: May I just comment on
2 it?

3 CHAIRPERSON BERRY: Yes, Chief.

4 ASST. CHIEF MONROE: That was not race or
5 gender specific. I've had people --

6 CHAIRPERSON BERRY: I understand.

7 ASST. CHIEF MONROE: I've had people --
8 I've had women try to pull pistols on me. It's just a
9 matter of a police officer should be trained to be
10 safe and so, it's not directed at young African
11 American men. It's just the way a police officer is
12 trained to be safe.

13 CHAIRPERSON BERRY: Oh, I understand that.
14 I just wanted to see whether in the white community,
15 to the extent that Mr. Bright represents anything in
16 the white community, there was any sense that boys had
17 to be taught as one of the major items on their agenda
18 to walk around not put your hands in your pocket if
19 you see a police officer. Keep your palms, you know.
20 And watch it. And I just didn't -- it wasn't my
21 sense from the friends I have and it's not a research
22 kind of analysis. Or, it's just a random answers,

1 that that was not a major item on the agenda of the
2 white folk I know in terms of teaching their kids.
3 So, that's why I asked the question.

4 And I guess we have to, then.

5 All right. I want to thank the panel very
6 much. Thank you very much for coming. This has been
7 very useful to use.

8 We will call the next panel without a
9 break because I took up the time asking questions.
10 And we let them talk too long.

11 (Whereupon, the foregoing matter went off
12 the record at 11:36 a.m. and back on the record at
13 11:42 a.m.)

14 **PANEL ONE - CRIMINAL JUSTICE**

15 CHAIRPERSON BERRY: We will start again.

16 This -- Could the sign interpreter please
17 ask whether anyone needs signing.

18 Thank you very much.

19 We'll now have Panel One discussing the
20 topic criminal justice. This panel will look at
21 criminal justice issues, particularly substance abuse
22 and mental health needs, the growth and impact of

1 prisons in rural American, juvenile justice reform
2 legislation, and solutions to these and other criminal
3 justice problems.

4 We have already been -- had you called up
5 so I don't need Mr. Hailes to ask you to come up.

6 First of all, we have Professor Richard
7 Dembo who is a professor of criminology at the
8 University of South Florida. He has had a combination
9 of practical work, teaching, and extensive research.
10 And we're so grateful that he is here with us. He's
11 been a consultant with such organizations as the
12 Office of Juvenile Justice and Delinquency Programs,
13 the Center for Substance Abuse Treatment, and the
14 National Institute of Justice.

15 He is a graduate of New York University,
16 Columbia University, and his Ph.D. is from New York
17 University.

18 Could you introduce your colleague,
19 please?

20 PROFESSOR DEMBO: Yes, my colleague is Mr.
21 William Seeberger who works with me on a project
22 called the Youths Work Project evaluating an in-home

1 service for youngsters entering the juvenile justice
2 system in Hillsboro County, Florida.

3 CHAIRPERSON BERRY: All right. Thank you
4 very much.

5 We also have with us Ms. Tracy Huling, is
6 a national recognized researcher and policy -- public
7 policy analyst in the area of criminal justice. She's
8 also an award winning independent film and video
9 producer who frequently works on projects which
10 address critical social problems and the need of
11 unserved and under served audiences.

12 She has been active on these issues for
13 over 20 years. She's been working on a -- as a
14 criminal justice research consultant for the
15 Sentencing Project, Human Rights Watch, and the
16 National Criminal Justice Commission. She is a
17 graduate of Grinell College and the State University
18 of New York at Buffalo.

19 We have with us, also, Professor Janice
20 Joseph who is a professor of criminal justice at
21 Richard Stockton State College in New Jersey. She has
22 published a book, Black Youths, Delinquency, and

1 Juvenile Justice, and other publications. She is a
2 member of a number of professional associations
3 including the American Society of Criminology and the
4 Academy of Criminal Justice. She is a graduate of the
5 University of West Indies and from New York
6 University.

7 We have with us also Mark. Mark Mauer is
8 the assistant director of the Sentencing Project which
9 promotes the development of alternatives to
10 incarceration and conducts research on criminal
11 justice issues and reform. He's been doing this sort
12 of work for over 20 years on criminal justice reform.

13 He has received awards for his work. He's widely
14 known at the Sentencing Project for working on these
15 subjects. He is a graduate of Stony Brook and from
16 the University of Michigan, which means I will say
17 what, Vice Chair? Hail to the Victors.

18 VICE CHAIRPERSON REYNOSO: Yes.

19 CHAIRPERSON BERRY: Let us begin with
20 Professor Dembo.

21 PROFESSOR DEMBO: Thank you very much.

22 CHAIRPERSON BERRY: And what you will do

1 is summarize for about five minutes what is in your
2 paper. We've read your papers. And then we will have
3 questions for each one of you.

4 PROFESSOR DEMBO: Thank you. Right.

5 My colleague and I, William Seeberger,
6 have divided our presentation summary and William is
7 going to read that aspect of this.

8 MR. SEEBERGER: Thank you, Madam
9 Chairwoman.

10 To begin with, as we all know, there are
11 formidable challenges facing African American male
12 youths' healthy development in the inner city. This,
13 coupled with the differential implementation of
14 various laws, they have an increased likelihood of
15 involvement in the juvenile justice system.

16 Once in the system, organizational and
17 institutional practices and procedures, as well as
18 limited after care resources, foster these youths'
19 over representation. This leads to a tragic cycle of
20 recidivism, with profound personal, family, community,
21 and societal costs.

22 African American youth are over

1 represented in the group living below the poverty
2 level. And poverty is particularly acute in the inner
3 city. Poverty is associated with low rates of
4 academic achievement, high rates of school drop out,
5 teen pregnancy, poor health, hunger, substance abuse,
6 and delinquency.

7 Many youths entering the juvenile justice
8 system also have experienced physical or sexual abuse
9 problems and are functioning at a poor or low
10 emotional and psychological level. Many of these
11 difficulties can be traced directly to their family
12 history of alcohol, drug, mental health problems, and
13 their parents' or caregivers' own experience with the
14 criminal justice system.

15 These conditions make large numbers of
16 youngsters witness to, participate in, and be
17 victimized by the negative aspects of their
18 environment. In particular, violent crime
19 victimization rates are highest among African American
20 youth. These pictures of life in the inner city leads
21 to reduced sense of investment in and a high sense of
22 alienation from mainstream society. For example,

1 there's a higher prevalence and acceptance of drug
2 taking and delinquent and criminal behavior in the
3 inner city. A number of illicit economies develop in
4 these areas and serve as a source of income. Though
5 some of these activities do provide a sense of self
6 esteem and a feeling of achievement involvement in
7 illicit activities brings considerable risks.

8 In the case of drug dealing, exposure to
9 violence, particularly gun violence, personal
10 involvement in drug use, and economic addiction to the
11 high income in relation to legal employment, all
12 reduce the options for a socially productive role in
13 mainstream society.

14 Particularly troubling are the African
15 American males youth involvement in drugs coupled with
16 their limited involvement in treatment and
17 intervention services. The project Dr. Dembo and I
18 work on we have showed that African American males
19 test positive for cocaine about three times as often
20 as white males. Yet, they report receiving
21 intervention services about one-sixth of the time as
22 their white counterparts.

1 Further, inner city youth are at risk of
2 being infected by or transmitting HIV through their
3 involvement in injecting drugs and in unsafe sexual
4 activity with multiple partners.

5 The small number of resources for inner
6 city youth are declining, not enough positive inner
7 city role models exist, and too many African American
8 male youth are gravitating to deviant behaviors.

9 African Americans over represented at ever
10 decision point in the juvenile justice system.
11 Further, the over representation increases from
12 decision point to decision point. Overall, juvenile
13 crime continues to grow and has resulted in
14 increasingly clogged and backlogged juvenile court
15 system resulting in less involvement in case
16 deliberation.

17 There is legislative momentum in many
18 states to merge the juvenile and the adult criminal
19 courts. However, these efforts will not respond
20 effectively to the challenges presented by a younger
21 and more troubled offender population. We believe
22 that centralized intake and assessment facilities for

1 arrested youths are critical for proper identification
2 of the youth's problem behavior and the implications
3 of these problems for law enforcement, the courts,
4 juvenile justice, and service delivery programs.

5 In looking at the Tampa Juvenile
6 Assessment Center, younger aged youths report less
7 severe alcohol and drug problems, less delinquency
8 referral history for violence, property, and public
9 disorder offenses, and less arrest charges for
10 property felonies or misdemeanors than older age
11 youths.

12 Clearly, and obviously, younger age youths
13 have had less time to develop and establish delinquent
14 behaviors. Therefore, it's crucial that we do
15 identify troubled African American male youth at an
16 early point and that we provide them with adequate
17 substance abuse and mental health services.

18 Again, my colleague, Dr. Dembo, now will
19 speak to ways we can ameliorate the situation and some
20 innovative approaches to meeting these needs.

21 PROFESSOR DEMBO: Thank you very much.
22 Really good job, Billy.

1 The -- Billy has pointed out from our
2 understanding and knowledge of the literature, own
3 experience, that the rates of service utilization are
4 very high among African Americans and among other
5 ethnic minorities in this country, which is a tragic
6 thing. And part of the reasons for that are multiple.

7 One is that there are inadequate resources for these
8 services. That the services that are exist, many
9 groups have to depend on limited funded public
10 services that are of low quality and over burdened
11 case loads.

12 .In addition, many of these services don't
13 have sufficient cultural sensitivity on the parts of
14 their staff to the needs of these target groups in the
15 community. There's a lot of cynicism among people,
16 particular African American families, about these
17 services because of the inability of them to access
18 quality services to help their children. It is tragic
19 that many of these children receive services only
20 after they enter the justice system, which should
21 never happen in this country.

22 If we can -- We need much more early

1 intervention, high quality screening and assessment
2 programs to divert as many children as possible from
3 involvement in the justice system. As Mr. Seeberger
4 indicates, when a youngster becomes involved in the
5 system, and Mr. Mauer's associates have indicated in
6 their work, there are other issues that surround their
7 experiences that aggravate and increase the likelihood
8 they will stay in that system and move into the adult
9 system.

10 Many years ago we did a study in Tampa
11 following a group of youngsters who entered our
12 juvenile detention center. And within 36 months
13 following their initial interviews, 52 percent had
14 entered the Florida Department of Corrections. A
15 tragic statement for the lack of services that was
16 responsible in large measure for that humongous
17 movement.

18 We need holistic services because many
19 youngsters who are experiencing substance abuse
20 problems and mental health problems, these are
21 symptomatic of a variety of other issues they're
22 experiencing in their lives. One problem at a time

1 focus for interventions have not been successful and
2 will not be successful without dealing in a more
3 comprehensive way with the needs of these children and
4 their families.

5 These services should be community-based.

6 In the previous panel, significant discussion was
7 devoted to large institutional facilities primarily in
8 the focus of that discussion, for adults. In juvenile
9 justice system, there has been also a moment for this.

10 And these large sized facilities, housing youngsters
11 for protracted periods of time which are primarily
12 security oriented, do not have the resources devoted
13 to treatment and intervention that is needed.

14 We need to have more community-based,
15 community and neighborhood, located facilities drawing
16 on the strengths of the community, empowering the
17 community, involving the community to grapple with the
18 challenges that their children present and that they
19 can provide more meaningful solutions to than
20 institutionalized responses involving people who may
21 not be sensitive to the needs of the community and
22 their particular cultural needs. Particularly

WASHINGTON, D.C. 20005-3701

1 programs located in rural locations where staff are
2 hired from those places who have no knowledge or
3 contact with the groups of individuals who are housed
4 in those facilities.

5 We need to look at a whole continuum of
6 service provision, from both initial screening -- and
7 this is where a centralized intake facilities and
8 communities can be very valuable in this effort. To
9 identify at an early point who are the youngsters who
10 are presenting problems that need intervention with a
11 focus to doing as much early intervention as possible.

12 Perhaps establishing specialized units within public
13 defender's offices with really empowered resources to
14 make a constructive difference in this regard.

15 And for those youngsters who seem to be
16 presenting problems, to do an in depth, quality
17 evaluation of their comprehensive needs and problems,
18 that need an intervention, and to deal with pre-
19 treatment issues because many families, as we noted
20 earlier, are cynical about the justice systems and its
21 claims that they want to help. To go out and reach
22 out to these families, to bring them in and make them

1 treatment alliances to treatment process for their
2 children. That is a very enriching experience and
3 also has been shown to be highly effective in
4 treatment outcome.

5 We also need to provide more effective
6 quality treatment with an assurance that the treatment
7 people are getting maintain their quality over time.
8 And one of the concerns we've had in Florida is we had
9 a lot of contracting to private agencies by the
10 juvenile justice system to provide treatment has led
11 to a lot of misuses of those resources limiting their
12 providing treatment as against providing security.

13 Empowered after care programs. For
14 youngsters released from programs, there needs to be a
15 quality after care service that is long term if
16 necessary, providing treatment that should not end 60
17 days after they're released from a program. And the
18 interest of the justice system and our concern is
19 communities for these children should not cease at the
20 end of the period of sanction. They should continue,
21 if necessary, into young adulthood. And we also need
22 oversight of these public agencies, tying their

1 responsibilities, providing quality services to
2 children and their families in the community to their
3 receiving block grant monies from the federal
4 government. Those are taxpayers' money that these
5 people contributed to and I think they have a right to
6 expect that they'll be used to the benefit of the
7 community and their children.

8 Thank you.

9 CHAIRPERSON BERRY: Thank you very much.
10 There will be questions.

11 But next, what we want to do is we're
12 going to come -- Ms. Huling, you're next, and then
13 we'll get to Ms. Joseph. And that's the order. And
14 finally, Mr. Mauer.

15 Go right ahead, please.

16 MS. HULING: Last year I completed a
17 documentary film entitled, Yes, In My Backyard, which
18 profiles a farming community turned prison town.

19 VICE CHAIRPERSON REYNOSO: Was it Not In
20 My --

21 MS. HULING: It's called, Yes, In My
22 Backyard.

1 VICE CHAIRPERSON REYNOSO: Ah, Yes, In My

2 --

3 CHAIRPERSON BERRY: And if you're watching
4 the tape, five minutes. The clock is wrong. Five
5 minutes, if you can do it.

6 Can you do it in five minutes?

7 MS. HULING: I'm going to try and rip
8 through this.

9 CHAIRPERSON BERRY: Try, if you can.
10 Don't rip too fast because we won't hear what you're
11 saying.

12 MS. HULING: I also brought a five minute
13 clip but if we don't have time, we don't have time.

14 CHAIRPERSON BERRY: You have a clip?

15 MS. HULING: Yes. Of the film.

16 CHAIRPERSON BERRY: Do you want to show
17 the clip afterwards?

18 MS. HULING: Yes.

19 CHAIRPERSON BERRY: Well, that's another
20 five minutes. But five minutes to talk.

21 MS. HULING: I'm going to try.

22 Making the film provided me with an in

1 depth and unusually personal introduction to a
2 widespread and under examined phenomenon with
3 potentially far reaching consequences for young inner
4 city African American men, the use of prisons as a
5 conscious economic development strategy for depressed
6 rural communities.

7 Since 1980, the majority of new prisons
8 built to accommodate the exploding growth of prisons
9 have been placed in rural areas with the result that
10 the majority of federal and state inmates are now
11 housed in rural America. Between 1990 and 1997, 203
12 correctional facilities were built in rural
13 communities and small towns.

14 Communities suffering from declines in
15 farming, mining, timber work, and manufacturing are
16 now begging for prisons to be built in their
17 backyards. Many rural communities now actively lobby
18 for prisons and offer financial assistance and
19 concessions to get them such a donated land, upgraded
20 water and sewer systems, and housing subsidies. With
21 the rapid privatization of prisons, some communities
22 are getting into the private prison business

1 themselves, seeking and getting private financing to
2 build spec prisons in their backyards.

3 Prisons as a growth industry are dependent
4 upon ever increasing numbers of prisons and the U.S.
5 provides ideal market conditions. Our nation spends
6 more on prisons and incarcerates than any other
7 industrialized country in the world.

8 Since African American, Latino, and native
9 peoples are incarcerated in numbers vastly
10 disproportionate to their numbers in the overall
11 population, the impact of incarceration falls most
12 heavily on communities of color. Evidence suggests
13 that a majority of state prisons come from a
14 relatively small number of communities in the inner
15 cities. For example, data published in the early
16 1990s showed that 75 percent of all New York State's
17 prisoners come from seven predominately African
18 American and Latino communities in New York City.

19 What happens when large numbers of people
20 from a relative few inner city communities are
21 transplanted to a relatively few rural communities via
22 incarceration? My research on Cooksackie, New York,

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS
1323 RHODE ISLAND AVE., N.W.
WASHINGTON, D.C. 20005-3701

1 the town profiled in my film, and my reading of the
2 existing literature suggests two potentially
3 significant consequences. The first is a transfer of
4 wealth in various forms, out of inner cities and into
5 rural communities. The second is a major disruption
6 and/or prevention of strong family ties between
7 prisoners and their families which research shows is
8 the single most important factor in reducing
9 recidivism.

10 First, the transfer of wealth. Existing
11 research suggests that prior to incarceration most
12 prisoners are economic resource to their
13 neighborhoods and immediate families. Once arrested
14 and incarcerated, this economic value is transformed
15 and transferred. It's transformed into penal capital,
16 that is, the demand for salaried correctional
17 employees to provide security. It's also transferred
18 to the locality of the prison where the penal systems
19 employees reside and live.

20 In addition to the transformation of a
21 young black man's economic value into the demand for
22 salaried prison employees through his incarceration,

1 it's also important to consider the benefits that
2 accrue to rural communities as a result of the
3 exploitation of his labor once he's imprisoned.

4 In an article assessing the impacts of
5 prisons on host communities, Katherine Carlson says,
6 "Overall, the findings on prisons -- prison impact
7 show that prisons provide considerable economic
8 benefits to their host communities and surrounding
9 areas through direct employment, local purchasing, and
10 inmate labor." She states, "Prisons as industries
11 have the added plus of a captive work force available
12 for community projects."

13 Community work projects performed by
14 prisoners are very common in prisons located in rural
15 communities and prison officials see them as good
16 community relations. There can be a lot of
17 competition within the community for the services of
18 inmates working both inside and outside the prison.

19 In addition, concern over the exploitation
20 of prison labor by public and private prisons is
21 growing. Since 1990, 30 states have made it legal to
22 contract out prison labor to private companies where

1 the workers have no rights and get paid a fraction of
2 outside wages, much of which they don't often get to
3 keep. Private companies using inmate labor pay no
4 overtime, no vacation, no sick pay, no unemployment
5 insurance, and no workers compensation. Prison
6 workers don't have the right to organize, strike, file
7 a grievance, or talk to the press. They can be hired,
8 fired, and replaced at will.

9 Another item of potential wealth that is
10 transferred out of inner cities along with inmate
11 labor is that prisoners residential status as recorded
12 in the census. Inmates of prison facilities are
13 counted for census purposes in the communities where
14 the institutions are located. This policy has many
15 implications.

16 Calvin Beal reports in at least 60 rural
17 U.S. counties the shift from population loss in the
18 1980s to population gain in the 1990s can be fully or
19 partly explained by increases in prisoner populations.

20 Because a variety of federal and state funding
21 allocations are based in some fashion on the census,
22 it may be that rural communities hosting prisons are

1 gaining government funding as a result of high
2 incarceration rates while inner city communities are
3 losing funding.

4 In states where a significant percentage
5 of the prisoner population is drawn from a relatively
6 small number of communities or where prisons are
7 particularly large as in California, or clustered in
8 one region, one can posit that these census driven
9 impacts are profound.

10 Another potential consequence for
11 communities of prison related population shifts are
12 shifts in political representation and power.
13 Political districts are based on population size and
14 determine the number of congressional, state, and
15 local representatives.

16 As prison development in rural communities
17 has surged over the last few decades, social programs
18 benefiting the inner city poor have receded
19 dramatically. A stark illustration of the trade offs
20 for young minorities in government policies which
21 prioritize funding for incarceration is the stealing
22 of higher education dollars for the building of

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS
1323 RHODE ISLAND AVE., N.W.
WASHINGTON, D.C. 20005-3701

1 prisons. Public concern over this has recently
2 surfaced in many states.

3 Since fiscal year 1988, New York's public
4 universities have seen their state support for their
5 operating budgets plummet by 29 percent while funding
6 for prisons has increased by 76 percent. In actual
7 dollars, there's been a nearly equal trade off with
8 the New York State Department of Correctional Services
9 receiving a \$761 million increasing during that time
10 while state funding for New York City's -- for New
11 York's city and state university systems has declined
12 by \$615 million.

13 Young people of color have been the
14 hardest hit by these shifts. There are now more
15 blacks and Hispanics locked up in prison than are
16 attending state universities and since 1989, there
17 have been more blacks entering the state prison system
18 for drug offenses each year than there were graduating
19 from the state university system with undergraduate,
20 master's, and doctoral degrees combined.

21 Prisoners, their families, and society at
22 large benefit when prisoners are able to maintain or

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS
1323 RHODE ISLAND AVE., N.W.
WASHINGTON, D.C. 20005-3701

1 establish positive relationships with their families.

2 Studies examining the impact of the family on
3 recidivism have consistently found that prisoners who
4 were able to maintain strong family ties while in
5 prison have significantly greater success on parole.
6 The most extensive and often quoted study on family
7 impacts points to the significance of visitation as
8 the crucial mechanism where families maintain or
9 develop strong ties.

10 As prisoner populations are increasingly
11 made up of inner city men placed in rural prisons,
12 opportunities for visitation important to maintaining
13 family ties are dramatically diminished. Moreover,
14 the practice by states of shipping prisoners out of
15 state, a practice that is fueled and likely to be
16 increased by prison privatization, may significantly
17 increase the incidence and speed of prisoner family
18 breakdown.

19 I am -- I believe, really, that over the
20 last two decades we have created a prison industrial
21 complex. I believe it's dependent on the economic
22 decline both in rural areas and in the inner cities.

1 I'm pessimistic about the potential for change over
2 the next decade. I think there's too much money in
3 it.

4 I think if change is going to happen, it's
5 going to happen on the grassroots level. I think it's
6 going to come as a matter of ordinary citizens
7 becoming concerned about this issue. I do have some
8 suggestions. Since this is a vastly under researched
9 area, no one essentially knows about it. No one is
10 talking about it. There have been some journal
11 reports. There have been some newspaper articles
12 about it. But those don't cover the relationships
13 between inner cities and rural communities.

14 My suggestions are to fund applied
15 research to determine the actual economic effects on
16 inner city and rural community of prisoner driven
17 population shifts and census policies. The
18 exploitation of prisoner labor and increased state
19 spending for corrections.

20 I think research should be funded to
21 determine the extent to which prisoner family ties and
22 recidivism have been effected by prison siting

1 practices over the last two decades. There's been
2 absolutely no research on this for the last 20 years.
3 Provide opportunities of citizen leaders in inner city
4 and rural communities to come together to discuss the
5 relationship that's now been forged between these two
6 communities.

7 It's been my experience that there are
8 enlightened leadership. There is enlightened
9 leadership on both sides, both in rural communities
10 and in inner city communities that are at this point
11 now willing to discuss this fateful bond that has bene
12 forged.

13 I also believe that opportunities for
14 experts in a variety of fields including criminal
15 justice, rural policy, economic development, and so
16 on, need to have the opportunity to come together to
17 discuss the prison industrial complex.

18 And finally, my suggestion is to fund
19 outside organizations to research and mount legal
20 challenges to some of these practices.

21 VICE CHAIRPERSON REYNOSO: Thank you very
22 much. The Chair suggested that maybe if you're

1 prepared, we can -- you can show the clip now. And
2 then we'll go to Dr. Joseph.

3 (Whereupon, the video presentation was
4 run.)

5 VICE CHAIRPERSON REYNOSO: Thank you very
6 much.

7 Dr. Joseph.

8 DR. JOSEPH: In 1974, the Juvenile
9 Delinquency Act was passed. And basically, what this
10 did was to establish a separate juvenile justice
11 system for juveniles. That is, youth under the age of
12 18. However, with the increase in violent crime, the
13 Federal Government has passed several federal
14 legislation to deal with juveniles.

15 One of the -- I'll just name the three of
16 them. Violent and hard core Juvenile Offender Reform
17 Act which was passed in 1996, the Violent and Repeat
18 Juvenile Offender Act, and the Juvenile Crime Control
19 and Prevention Act. And these were passed in 1997.

20 Now, basically, what these legislation did
21 was to allow the federal government to transfer
22 juveniles from the age of 14 and above to adult court

1 to be prosecuted as criminals if they were arrested
2 for violent crimes such as murder, rape, robbery,
3 aggravated assault, and any other serious offense.

4 Now, these legislation do have an impact
5 on the African American community because the crimes
6 for which I just names African Americans are
7 disproportionately arrested for these crimes, murder,
8 rape, assault. For example, in 1996, 40 percent, 47
9 percent, of all juvenile arrests for violent crimes
10 were African Americans.

11 So, one effect would be that they are
12 arrested disporportionately for these crimes. In
13 addition to that, history has demonstrated that
14 minority youth, especially African American males, are
15 transferred disporportionately to adult court.

16 Now, these legislation not only would
17 transfer juveniles to adult court, but once they are
18 transferred to adult court, they will be sent to adult
19 institutions if they are sent to an institution. And
20 this would increase the number of young African
21 American males in the adult system. In addition, once
22 these juveniles are transferred to adult court, they

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS
1323 RHODE ISLAND AVE., N.W.
WASHINGTON, D.C. 20005-3701

1 can also be subjected to death penalty. So, there is
2 also the probability that the number of young African
3 males who would be sentenced to die would in fact
4 increase.

5 What is also interesting is that once the
6 juvenile is waived to adult court, the juvenile
7 remains in that court system even if that juvenile was
8 not convicted. He is not then transferred down if
9 he's arrested a second time.

10 Transferring juveniles to adult court
11 traditionally, from all the research presented, has
12 not been successful in deterring juveniles from
13 engaging in violent crimes. What this means is that
14 more African American young males would be in the
15 criminal justice system with the possibility that
16 there would be very little impact on the decline -- on
17 the juvenile delinquency rate.

18 So, waiving juveniles to adult court
19 therefore is not the answer to the crime situation
20 among African American males. At best, the waivers
21 are short term solution to a complex condition that
22 will not be simplified by transferring juveniles to

1 the jurisdiction of the criminal court. They merely
2 serve to appease the public's desire for retribution,
3 after which the majority of these African American
4 juveniles waived to criminal court will enter society
5 stigmatized by their criminal label and in all
6 likelihood more dangerous than they were before they
7 were sentenced as adults.

8 In order to deal with the problem of
9 violent crimes among young African American males, one
10 has to look at the factors that actually predispose
11 them to these criminal activities and some of them
12 were mentioned before. The environment, the family,
13 racism, and so forth.

14 Now, in terms of reform, the practice of
15 transferring juvenile to criminal court should be
16 abolished because of its ineffectiveness. As I said
17 before, if the end result is that we have a large
18 number of young black males being stigmatized and the
19 effect and the impact would be very negative for them.

20 The criminal justice system should in fact
21 design programs to rehabilitate offenders rather than
22 punish offenders. In addition, in terms of

1 prevention, prevention programs should be established
2 that focus on poverty, the lack of economic
3 opportunities for African American males which were
4 mentioned before, given the role of poverty and
5 economic inequities in fostering delinquency among
6 African American,s it is plausible that reducing
7 poverty and economic disparity among African Americans
8 and the rest of society would help reduce delinquency
9 rates.

10 Also, there should be focus on the
11 educational system. Many of you are aware of the
12 schools in the inner city, the present status of those
13 systems. So, there should be improvement in the
14 educational system. More recreational programs should
15 be provided for these individuals.

16 In other words, government should focus on
17 preventive measures, measures that would give African
18 Americans hope.

19 And I want to close with one article that
20 I read where a juvenile was transferred to adult court
21 for murder and at the end of the court, someone said
22 to him, do you know you can get the death penalty? He

1 said "Yes, I've have been dead for a very long time.
2 I just needed someone to push me in the grave."

3 CHAIRPERSON BERRY: Hmm, oh, my goodness.

4 DR. JOSEPH: Thank you.

5 CHAIRPERSON BERRY: That's very -- thank
6 you very much.

7 Mr. Mauer, please.

8 MR. MAUER: Thank you very much for
9 inviting me.

10 What I'd like to do very briefly is try to
11 review some of what we see in the criminal justice
12 system, the over representation, and describe what I
13 think is some of the factors that have caused this and
14 then what some of the responses might look like. And
15 I think in trying to do this, we're faced with a real
16 dilemma if you will.

17 If we look back about 50 years to 1954,
18 the time of Brown v. Board of Education, at that
19 point, African Americans constituted about 30 percent
20 of the people admitted to our state prisons
21 nationally. Today, after 45 years of the gains of
22 the civil rights movement, changes in very

1 constructive ways in the criminal justice system, that
2 figure has now increased to 50 percent of the people
3 admitted to state and federal prisons. So, how have
4 we seen such changes in such a short period of time
5 despite all these constructive changes in society?

6 We're also on the verge of a course at a
7 time when unless we can reverse some of these trends
8 and policies, I think we see a real disaster ahead for
9 the next generation. We know that for black males
10 born today, they stand a one in four chance of
11 spending time in prison in their lifetime. The
12 unintended consequences are equally severe if we look
13 at impacts on family and community stability, recent
14 research we've done on the implication on the loss of
15 voting rights as a result of felony convictions shows
16 that we're disenfranchising, disempowering people
17 through criminal justice policy.

18 Now, how do we understand where these
19 statistics have come from? I think there's several
20 places to look. The first question that comes up is
21 generally crime rates. Do African Americans commit
22 more crime and therefore does that explain why these

1 numbers are so enormous? Well, if we look at those
2 figures, we find that African Americans for some
3 offenses do have higher rates of committing certain
4 crimes, particularly assaultive crimes. But we also
5 find that those rates, those proportions, have not
6 changed in the last 20 years. So, the African
7 American arrest rate for violent crime is about 45
8 percent of all the rest but it's stayed in that range
9 for the last 20 years.

10 We also find, particularly in the late
11 1980s, a lot of concern about rising black juvenile
12 homicides. What we see now in analyzing that, that
13 was not, contrary to some popular misconceptions, the
14 result of a new generation of super predators as
15 they've been called, but rather the availability of
16 guns in many inner city areas. And similarly, the
17 decline in juvenile homicides the last several years
18 has been because police and community groups have made
19 focused attempts to get guns out of those areas and
20 the crime rates and the violent rates have dropped.

21 If we look at the criminal justice system,
22 I think we can see some very profound changes in the

1 last quarter century coming under the general rubric
2 of the get tough movement and the system has gotten
3 much tougher if that was the goal. We now have six
4 times as many people in our prison system as we did 25
5 years ago, a record that we're smashing every day.
6 And if we look at the particular impact on African
7 Americans, I think we see several sort of key points
8 to look at.

9 First, in terms of how actors in the
10 system deal with these issues, we've had some
11 discussion about what's been called driving while
12 black police stops, use of racial profiling where some
13 groups are much more likely to enter the system than
14 others.

15 Once they come in, although much of the
16 overt bias in the system has been eliminated in many
17 areas, the more unconscious bias still persist in many
18 ways. There's research showing that prosecutorial
19 discretion has an adverse impact, both on African
20 Americans, other minorities, not only offenders but
21 victims as well. And so, the black victim, the
22 Hispanic victim, may be under valued by the prosecutor

1 and so we get some very odd dynamics in some ways.
2 And we've seen this certainly play out in the death
3 penalty as well.

4 Probably the most significant change in
5 the last 15 years or so, of course, has been the
6 impact of the war on drugs where we've seen just
7 massive changes in the composition of the prison
8 population as a result of national policy. We've
9 heard, and it has been quite a bit of attention on the
10 crack cocaine issue and I don't want to underplay that
11 for a moment. That's a sentencing issue. People
12 would not be sentence were they not arrested in the
13 first place. And I think what we've seen is that law
14 enforcement resources, for some good reasons and bad,
15 have been targeted at inner city low income
16 communities, therefore making it much more likely that
17 low income minorities who use drugs will enter the
18 system much more so than middle class people who use
19 drugs in more suburban areas.

20 Once they come in the system, the whole
21 advent of mandatory sentencing, the crack cocaine
22 disparity, exacerbates the impact on African Americans

1 in particular and it's been driving up these figures
2 in the system.

3 I think overall what we've seen
4 essentially in the last quarter century is that as a
5 national policy, whether intended or not, we've come
6 to use the criminal justice system as a means of
7 dealing with social problems. That's certainly not
8 the way I would deal with social problems with my
9 children, but when it comes to low income children,
10 that's what we've been doing.

11 Let me just say a couple of quick things
12 about how we could respond to these problems.

13 Certainly there have been some
14 constructive programs and changes started in the
15 criminal justice system in recent years. Police in
16 some communities, Boston and other areas, have been
17 working with community groups to try to deal with the
18 epidemic of youth violence, to try to get guns out of
19 the hands of kids, and we're seeing some encouraging
20 results in some places.

21 The attention about police profiling has
22 led to legislation proposals, that we have more

1 statistical analysis of who police are stopping, why
2 they're stopping people, better kind of training for
3 police in how they could perform their duties without
4 this type of racial bias.

5 I think in the area of sentencing there is
6 virtual unanimity across the board among practitioners
7 and researchers that mandatory sentencing is one of
8 the worse ideas that's come down in a long time. It
9 leads to unfairness, injustice, and racial disparity.

10 The only people who haven't quite appreciated that
11 are the people on Capitol Hill, I think, and that's
12 unfortunate.

13 We've seen some encouraging developments
14 in terms of diverting substance abusing offenders into
15 treatment. The potential that is still limited by the
16 sentencing policies that we've had by the use of
17 criminal justice system but there's a lot of
18 opportunity to use treatment as a diversionary option
19 instead.

20 And I think we should also encourage the
21 legislators, when passing new sentencing legislation
22 or when funding new prisons, to adopt racial and

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS
1323 RHODE ISLAND AVE., N.W.
WASHINGTON, D.C. 20005-3701

1 ethnic impact statements. In other words, to try to
2 project in advance what would be the likely racial and
3 ethnic impact of these policies once they're
4 implemented. As it is now, we rarely have any
5 discussion whatsoever in advance about this. I think
6 this could be done without having any negative impact
7 on public safety. The idea is how can you meet public
8 safety concerns without having some adverse racial
9 bias concerns.

10 Certainly, if we had had a discussion such
11 as this around the crack cocaine sentencing policies
12 ten years ago, before Congress enacted these policies,
13 it's possible that we would have seen some different
14 types of legislation to deal with that particular drug
15 problems.

16 Finally, I think we need a national
17 commitment and change -- a different way of doing
18 things that basically suggests what all parents know
19 and that is that if we want our kids to grow up happy
20 and healthy, and law abiding, we need strong families
21 and strong communities. That's what most middle class
22 people do as a means of having their kids stay away

1 from trouble. They provide resources. They have good
2 schools and good jobs available to them. They don't
3 rely on the police and death penalty to keep their
4 kids going in a straight direction. They do it in a
5 much more positive way and I think we need to spread
6 those resources and that way of doing things to other
7 communities as well.

8 Thank you.

9 CHAIRPERSON BERRY: Commissioners have
10 questions.

11 VICE CHAIRPERSON REYNOSO: Yes, I have a
12 question that in some ways applies to each of the
13 panelists. But I'll ask it more directly of Dr. Dembo
14 and Dr., Professor, Seeberger, I'm not sure.

15 Pardon?

16 MR. SEEBERGER: Just Mr. Seeberger, sir.

17 VICE CHAIRPERSON REYNOSO: You mentioned
18 early intervention and in some ways I think each of
19 you has in different ways focused upon the importance
20 of that. But the focus of my question is, what can be
21 done to bring to the attention of legislators or
22 community leaders the realities that you folks have

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS
1323 RHODE ISLAND AVE., N.W.
WASHINGTON, D.C. 20005-3701

1 brought to our attention? By way of example, some
2 years ago I was on the California Supreme Court and I
3 was visiting the courts in Fresno, California.

4 The judge in charge of the juvenile
5 courts, and there were several judges, the presiding
6 judge took me around and showed me the facilities, and
7 told me that they had had for the last several years a
8 very effective federally funded program for dealing
9 with youngsters who first came in contact with the
10 criminal justice system.

11 And that they had divided the children,
12 because it was a research project, arbitrarily. Half
13 of the youngsters would report in the way they
14 normally did, i.e., once a month, normally by phone,
15 and half of the youngsters would receive very
16 intensive supervision. I forget the numbers but it
17 was just relatively few youngsters per probation
18 officer. And those who received intensive supervision
19 had the professional visit their homes, visit the
20 schools, work closely with them, find mentors for
21 them, all that sort of thing.

22 At the end of the process, he told me, the

1 recidivism rate was ten percent for those who had
2 close supervision, 90 percent for those who did not.
3 And this had gone on several years, he told me, so it
4 was not a fluke. And he was asking my help in trying
5 to persuade the board of supervisors or others to
6 continue the funding of that program because he had
7 said that the local officials had said what a great
8 program but we don't have the money. We're fortunate
9 that the feds have the money for a while but it's
10 going to come to an end.

11 So far as I know, it came to an end. To
12 me, that bespeaks of somehow not -- well, they clearly
13 understood, because they got the reports, but those
14 elected officials did not feel that the constituents
15 would approve of their putting money into precisely
16 the types of programs that you folks have been talking
17 about, but instead wanted to continue with a program
18 of punishment rather than rehabilitation. Or indeed,
19 a program of punishment after crimes have taken place
20 instead of preventing crimes.

21 So, my question to really all of you, and
22 Ms. Huling's comments were a little bit different but

1 I think they still relate to my same concern, how do
2 we get those realities to the policy makers? And in
3 some ways, how do we get those realities to the public
4 so that then the policy makers feel they're doing the
5 right thing politically to worry about preventing
6 crime, not just punishing after the crime takes place?
7 And by preventing crime, doing good things for those
8 youngsters.

9 So, that's my general question, really,
10 starting with you folks, perhaps Mr. Seeberger, and
11 then any responses that you have because it seems to
12 me that that's one of the crucial issues from what
13 I've read, and what I know, and the overview panel
14 that just came before us, and really what you folks
15 have to say.

16 MR. SEEBERGER: That's certainly a
17 challenge, sir. I believe we really need a change in
18 thinking, a new paradigm, in look at the cost benefits
19 of prevention versus the system costs and the cost of
20 incarceration.

21 VICE CHAIRPERSON REYNOSO: Excuse me. I
22 couldn't help but think, when I was talking to that

1 judge, about the number of burglaries, afternoon
2 burglaries, that probably had not taken place because
3 they had the recidivism rate of only 10 percent among
4 those who had close supervision. I mean, it seemed to
5 me that it would be -- it was practically, among other
6 things, a public safety program and yet apparently not
7 recognized as such by the supervisors who didn't feel
8 that they would be rewarded politically. That they
9 would be accused of being soft on crime, coddling
10 criminals, if a 14 year old does something back, shoot
11 him. You know that sort of reaction.

12 MR. SEEBERGER: Right. Right. Again, it
13 is a very challenging issue and I think we just need a
14 change in thinking. We need to look at prevention.
15 We need to look at educating them before they get into
16 trouble. And I think we really need to look at early,
17 first time offenders, and target that group.

18 How to convey that to policy makers is
19 difficult. The research is out there. The statistic
20 you shared with us is very impressive to me.

21 VICE CHAIRPERSON REYNOSO: Excuse me. I
22 went to one of my colleagues at the law school, I

1 teach at UCLA, and I said, hey, this is this great
2 program I heard about. How do we make that national?

3 Oh, Cruz, he says, there's been dozens of programs
4 like that. They've all come out the same way. They
5 all show the same thing that early intervention really
6 helps with percentages. Maybe not that dramatic but
7 they're very good. The research has been done, he
8 says.

9 MR. SEEBERGER: The research has been
10 done. And it makes sense. It makes sense if we have
11 early intervention. If we put role models in families
12 that don't have role models, that makes sense
13 logically. How to convey that is difficult. Maybe I
14 will pass that back to you, ladies and gentlemen, and
15 the commission. I think having commission on these
16 types of topics, gathering research that has been done
17 in an aggregate fashion that can be presented to
18 policy makers I think will help.

19 I think doing more cost benefit analysis,
20 as you said, sir, the number of burglaries that did
21 not occur, that's staggering. And that saved money.
22 That saved people's own personal grief and stress. I

1 think we need to look at those issues and try to
2 convey that. The research has been done. It's time
3 now to fund the programs.

4 VICE CHAIRPERSON REYNOSO: Yes sir?

5 PROFESSOR DEMBO: There have been a number
6 of interesting gatherings on a national level that try
7 to develop a sense of what the best practices are.
8 And just for example, touching on a point you made,
9 sir. The Robert Wood Johnson Foundation set up a
10 national meeting in Annapolis, Maryland in October and
11 they invited different people to have focus groups on,
12 among others, barriers to effective treatment and
13 impact of services. And there were practitioners, and
14 researchers, and policy makers, not at the legislative
15 level, from all over the country. And there was a
16 theme in that group that there was an ignorance of
17 what effectively works out there.

18 And we know. We're involved in the
19 research. We see the results. We know there are
20 promising studies. We know that in specific areas
21 people are aware of those findings. But there are
22 many --

1 VICE CHAIRPERSON REYNOSO: Sir, policy
2 makers, you're saying, were ignorant?

3 PROFESSOR DEMBO: They are not. And when
4 they are faced -- and I was at a conference in Los
5 Angeles last October funded by the Justice Department,
6 that there were treatment issues among adults in the
7 system. And questions were raised about let's -- each
8 state had representatives from different levels. The
9 corrections chairperson, the legislators, and there
10 was woman who came, a legislator from Minnesota. And
11 she asked, how do I evaluate the stuff that I get on
12 my desk. I'm in the legislative process. I have 15
13 minutes between this and that committee to make big
14 decisions. I get this from a managed care program
15 telling me this is the answer. Everything else
16 doesn't work. How do I evaluate that? How do I go to
17 a committee ten minutes later and make a decision
18 about --

19 So, I think what needs to be done, I would
20 recommend to your commission to consider that there be
21 provided to each state's legislature kind of a task
22 force to educate them about what is the available

1 stock of knowledge, what are effective programs, what
2 are the cost effectiveness of these programs against
3 these tragic alternatives and momentum that's been
4 going on in this country for the last decade to build
5 more prisons and long term institution facilities for
6 juveniles. All the tragedies associated that all of
7 us have pointed out, to let them know what's at stake.

8 And true, as it is in the community, there
9 are enlightened, caring leaders and there are in the
10 legislature are enlightened caring leaders there who
11 just don't know what to do. And there are many others
12 who are in politics because it's a profession for
13 them. We want to be able to reach those who are the
14 visionaries, to galvanize the political process, to
15 provide the leadership, to have this education that
16 they will then acquire passed on and inform their
17 decisions about public policy. We need much more of
18 that.

19 MR. MAUER: If I could just a couple of
20 things. First, I think there is good evidence to show
21 that when viable options are presented, the public
22 will often embrace them very well. If we look at the

1 history of drug courts in just the last eight or nine
2 years. You know, 1990 there are two or three drug
3 courts starting in the country. Today there's
4 something like 300. And we don't have all the
5 research in yet but the initial results are
6 encouraging.

7 And to me, what's most significant about
8 it is that when we offer a reasonable option that says
9 if somebody's got a substance abuse problem, that
10 person needs to be in treatment. The courts understand
11 that. The communities understand that. There's been
12 no backlash. So, I think it tells the politicians
13 that there are options.

14 Secondly, I think we need to bring a
15 broader group of people into the discussion as well to
16 influence policy makers. I think our crime control
17 policies are having some very negative impacts on many
18 communities. We need to be talking with business
19 leaders about what those impacts look like and how
20 their desire to have a trained work force are going to
21 be hurt by some of these policies. We need to talk to
22 higher education leaders about the trade offs in

1 funding and resources. And parents who are thinking
2 about paying for their kids' college tuition should be
3 concerned as well.

4 DR. JOSEPH: There should be more dialogue
5 between the public and politicians. This attitude of
6 get tough on crime, I think the policy makers believe
7 that's what the public wants.

8 VICE CHAIRPERSON REYNOSO: Yes.

9 DR. JOSEPH: And as was suggested by Marc,
10 if in fact they are told and explained the benefit of
11 certain programs in terms of preventive measures, they
12 would actually accept these measures.

13 I think I was surprised when I went to
14 Korea, Seoul, Korea, in last summer. And I was
15 surprised with the kind of innovative rehabilitative
16 programs they had in their juvenile system. Something
17 that -- I mean, I'm sure the public here would be very
18 much appalled at if we were to institute those
19 programs here. But they were working. They were
20 effective and they were working.

21 MS. HULING: I'm the sort of cynic in the
22 group.

1 CHAIRPERSON BERRY: Talk right into the
2 mike, turn it towards you, Ms. Huling, so we can hear
3 your cynicism.

4 MS. HULING: I think one of the best ways
5 to bring public attention to this issue, and to the
6 fact that this a disaster. This isn't even a disaster
7 in the making, this is a disaster. Is that we should
8 look at what's going on in New York City right now.
9 The civil disobedience, the coming together of people
10 from all classes and all races, and all religious
11 faiths, around the issue of police brutality and
12 misconduct in New York City is astonishing, inspiring,
13 and it is going to lead to some change.

14 I would suggest that we think about that.

15 VICE CHAIRPERSON REYNOSO: Thank you.

16 CHAIRPERSON BERRY: Yes, Commissioner Lee.

17 COMMISSIONER LEE: I just have one
18 questions.

19 In this atmosphere of getting tough on
20 crime, I'm from California and I thought the three
21 strike law was very harsh and then I found out from
22 Mr. Bright that we had the two strikes law in other

1 parts of the country. And in Oakland, California, the
2 chief of police who by all counts has done a
3 tremendous job in reducing crime in that area, he was
4 forced to resign because the elected leadership felt
5 that he was not doing enough to really get tough on
6 crime.

7 I'd just like to ask the panelists,
8 especially Mr. Mauer, whether you have any statistics
9 or any thoughts on the actual impact on the three
10 strike law? Does it really so-called reduce crime as
11 the proponents have said? And what are the specific
12 impacts on black males?

13 MR. MAUER: The short answer is no, it's
14 not responsible for reducing crime. And there's some
15 good research to demonstrate it.

16 Some of the best research that I've seen,
17 certainly, shows that the reduction in crime in
18 California since three strikes was adopted basically
19 continues a trend that started two or three years
20 before the law was implemented. And it's a trend that
21 we see nationally as well. So, the proponents of the
22 law like to talk about the declining crime since it

1 was adopted. You can't look at these issues in
2 isolation.

3 One of the issues the proponents talk
4 about is the decline in murder rates in California.
5 And they say, well, you see, there's a deterrent
6 effect. People are thinking about the three strikes
7 and they don't want to commit a murder now. Well,
8 this seems sort of odd to me. California, as you well
9 know, has the death penalty and I think something like
10 500 people on death row. If the death penalty isn't
11 enough to deter murder, why would three strikes, 25
12 years to life, be more of a deterrent than the death
13 penalty? So, it's not at all clear that this is
14 what's going on there.

15 As you also know, I'm sure, it's leading
16 to enormous costs in the -- not only in the correction
17 system but the local level in jail, court crowding.
18 If you want to have a civil suit heard in Los Angeles,
19 you have to get in line for a long time now because
20 diversion of resources and things like that. And in
21 many ways, I think that it's not the least bit
22 surprising.

1 Criminologists have known for 100 years
2 that if you want to have any type of deterrent effect,
3 it's the certainty of punishment, not the severity of
4 punishment. If you can somehow increase the odds that
5 a given person will be apprehended, then they may
6 think twice about it. But merely upping the ante from
7 five years to 10, or 20, or 25 to life for somebody
8 who doesn't expect to get caught in the first place is
9 not going to have an impact.

10 And as we know, far too many people who
11 commit crimes are doing it under the influence of
12 drugs or alcohol. They're not planning it ahead.
13 They're certainly not planning getting caught. And
14 so, that deterrent effect that the politicians think
15 about doesn't mean very much in practice.

16 COMMISSIONER LEE: And how do you get the
17 message to the public that the getting tough on crime
18 really has not meant real reduction in crimes in the
19 community? Which is a message that has not been
20 related to the communities at all.

21 MR. MAUER: Well, I'm encouraged in part
22 by, I think, some of the developments in law

1 enforcement. We've heard about some of the terrible
2 things happening but some of the positive things or
3 the whole community policing movement of the last ten
4 or 15 years. And this looks very different in
5 different communities but the main underlying theme is
6 that as many police chiefs say, we shouldn't be
7 measured by how many arrests we can make but rather by
8 how many problems we can solve.

9 And I think this has sort of liberated the
10 police, if you will, because they've been arresting
11 people forever and ever and that's an after the fact
12 response to a serious problem. If the police can
13 develop better relations with communities, if they can
14 get information from communities, and work to solve
15 problems proactively, we can see a much better
16 response.

17 Certainly, San Diego is one of the better
18 examples of what's been going on there where they've
19 had some very substantial crime reductions. And
20 unlike New York, that we haven't seen the same kinds
21 of police community tensions because they've taken, I
22 think, a very different model. So, I think there is

1 some promise there.

2 CHAIRPERSON BERRY: Let me ask several
3 questions. The first is if we subjected the analyses
4 that have been done here this morning to criticism by
5 those who would disagree with you, some folks would
6 say that have you not heard that no one is interested
7 in discussing things like the root causes of crime.
8 That no one wants to discuss that any more. The
9 public isn't interested in why crime is caused or why
10 young black men might be in a position that they might
11 commit crime. That's first.

12 And the second is that all of this --
13 these treatment mechanisms of various types that you
14 keep talking about and more resources should be put
15 into them, that most people would focus on the
16 responsibility young black men have for not committing
17 crime. And the responsibility that the community has
18 and their families for seeing to it that they're in a
19 position not to commit crime. And so that, therefore,
20 you are looking at the wrong side of the problem.
21 That would be one thing.

22 And then the last thing is that the public

1 would -- whatever you think about it or whatever
2 speculation you may engage in, the public thinks one
3 thing which is that if you put people in jail, at
4 least they won't commit any more crimes.

5 Now. So, you may say that the crime rate
6 went up, down, we think it did it because of whatever,
7 whatever. But in point of fact, if you put Joe in
8 jail, Joe can't commit another crime except for what
9 he does in jail while he's in jail, out on the street.

10 So that incarceration must have some relationship to
11 at least the Joes of the world not committing crime.

12 So, I would ask how you would answer those
13 concerns that might be expressed to folks who are not
14 on this panel. And I'm the person, I'm this person
15 that's not on the panel. Do any of you have any
16 responses to any of this? Yes, please, Professor
17 Dembo.

18 PROFESSOR DEMBO: I would ask you to
19 consider what the aggravating effect would be on
20 locking a young person up and keeping this person in
21 jail. For example, first it's enormously costly and
22 the consequences of that on a large scale for other

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS
1323 RHODE ISLAND AVE., N.W.
WASHINGTON, D.C. 20005-3701

1 kinds of services and resources in the community like
2 education.

3 The second would be to consider what the
4 effects -- these youngsters are going to come back,
5 with few exceptions, to the community. What are the
6 consequences, the aggravating consequences, of being
7 located in such a facility for a long period of time
8 on increasing both the frequency and the severity of
9 what happens in their behavior when they come back
10 home.

11 What the aggregate costs would be to
12 society for youngster, who may spend as they grow into
13 adulthood, 25 to 30 percent of their life in prison?
14 In terms of economic costs, effect on family life,
15 lost income, lost productivity in the community, and
16 increasing social public mentality about the quality
17 of life that is being impacted on them.

18 If you look at it from that side of the
19 perspective, the human economic and social costs of
20 putting Johnny in jail over the lifetime of Johnny's
21 and Johnny's -- and the effect on Johnny's community
22 and family, is not only socially and ethically

1 staggering, it is something that our society , no
2 society, can tolerate. It presents to the next
3 generation a debt that they will never be able to
4 eliminate.

5 CHAIRPERSON BERRY: How about the argument
6 that we -- and I'll let others of you comment, that we
7 spent 20 or 30 years going around worrying about
8 prisoners rights, one; two, root causes of crime, that
9 when liberalism was in ascendancy in American
10 politics, we spent years, '60s, '70s, talking about
11 root causes of crime and trying to do some of these
12 things. And it didn't seem to get rid of the crime.
13 In fact, the crime rates increased.

14 So, why do we think that now if we were
15 divert resources from prisons which are a sure thing,
16 if you lock folks up, they're locked up. That's a
17 sure thing. To all of these things that you're
18 talking about when it's not a sure thing? And when
19 whatever else we know and however you might decry the
20 connection, crime rates are down. Maybe somebody else
21 wants to -- Yes.

22 MR. MAUER: The public thinks, well, Joe

1 is locked up. He's not committing any crimes out on
2 the street. Well, I think it depends who Joe is. If
3 Joe is a serial rapist, thank goodness he's in prison
4 and the community is much safer. If Joe is a kid
5 who's on the street corner selling crack and we picked
6 him up and locked him up for five years on a mandatory
7 sentence, I think two things have happened. One is it
8 takes about 20 minutes for Joe to be replaced on that
9 street corner by somebody else selling crack in many
10 neighborhoods. So, we haven't done anything about the
11 safety in that community.

12 And, secondly, we're spending \$100,000.00
13 of the taxpayers money keeping Joe locked up and it's
14 money that we're not spending on community policing,
15 probation officers, Head Start programs, or whatever
16 else we might think would have an impact on crime.
17 And whether liberals or conservatives, I'm sure we
18 could come up with some good use of that \$100,000.00.

19 The other part of the issue of
20 consequences and root causes, people who run treatment
21 programs, people who advocate for alternatives to
22 incarceration, everybody believes there should be

1 consequences just as parents believe there should be
2 consequences for their kids misbehavior. So, the
3 question I think is people need to take responsibility
4 for their behaviors. How do we do that in a
5 constructive what that's more likely to result in less
6 crime being committed? And I think the research is
7 quite clear. Drug treatment doesn't work for
8 everybody every time but it's far more cost effective
9 than building a new prison cell and I think there's
10 very little question about that.

11 CHAIRPERSON BERRY: All right.

12 DR. JOSEPH: Focusing on root causes is
13 long term and I think we have to convince the public
14 that it takes time. I think we are looking for quick
15 fixes which just does not work. We have to convince
16 the public to be patient and the results will show up
17 in -- over a long period of time. So, I think -- I
18 really think it can work.

19 And my slogan is that instead of getting
20 tough on crime, the government should get smart on
21 prevention.

22 CHAIRPERSON BERRY: And this is a reason

1 why deterrence doesn't work. You know, you lock
2 people up and you tell them it's two strikes out,
3 three strikes, or whatever, and they still commit
4 crimes. Or, if you tell them you're going to treat a
5 juvenile as an adult and they see that happening
6 around them, you say in your paper that it doesn't
7 have a deterrent effect, if I read your paper right.
8 Is it because these folks are just, what, "super
9 predators" who are going to engage in crime no matter
10 what so it doesn't matter what you do. And therefore,
11 they are irrational and they should be dealt with in
12 that way. Is that what's happening?

13 DR. JOSEPH: Well, one is that most of
14 these young people, as they are young and very
15 impulsive, they don't think they're going to get
16 caught.

17 CHAIRPERSON BERRY: I see.

18 DR. JOSEPH: And basically the other thing
19 is that they don't think about the consequences.
20 Well, if I do this, I'm going to be transferred to
21 adult court. They don't rationalize it. Most of
22 their behavior is impulsive. And those kinds of

1 punishment do not have very much deterrent effect on
2 impulsive behavior.

3 You're talking about rational, reasonable
4 behavior. And for juveniles, that's not what usually
5 occurs. It's very impulsive. And they always think
6 they can get away with it.

7 CHAIRPERSON BERRY: I have a question for
8 you, Ms. Huling, a specific question. I was very
9 interested in the wealth effect and the poverty
10 effect, disproportionately, of having people in
11 prison. Money taken from the cities, political power
12 and representation, all of those points that you made.

13 And I was wondering what impact do the provisions
14 that persons who are either incarcerated or may be put
15 on parole or probation can't vote ever? Does that
16 have any -- does that factor in further into the kind
17 of analysis you do? All these provisions about felons
18 not being able to votes.

19 MS. HULING: Well, it's interesting. This
20 is the whole sort of discussion, and my paper is very
21 exploratory because this has really not been discussed
22 before.

1 It would be very interesting if people
2 were allowed to vote, they got the vote back, what
3 would happen with their votes when they were in
4 prison. I mean, those votes would then be transferred
5 as well. They would be voting as members of rural
6 communities. One of the things that happen when you
7 transfer a lot of people out of inner city communities
8 to low density population rural communities is that it
9 completely changes the demographic make up of the
10 community. You will now have half your community
11 who's of color in an area that is almost all white.
12 Particularly in the north that's true.

13 CHAIRPERSON BERRY: You mean the people in
14 prison?

15 MS. HULING: Right. Right now they can't
16 vote. But in terms of -- I mean, Marc has done a lot
17 of work with different state legislatures and dealing
18 with these issues on developing recommendations around
19 the voting questions.

20 It seems to me that the disenfranchisement
21 issue atop of the political transfer of power, you've
22 got to put this stuff together. It doesn't exist in

1 little pieces. And that's where I say it's a disaster
2 now. If you put all these pieces together, if you put
3 the voting stuff together, and you put the fact that
4 their residential status and the power that brings are
5 now being transferred out of inner city communities,
6 and the funding that goes along with the bodies, if
7 you will, if you look at that and you look at it
8 together, what it looks like -- what it looks like is
9 a huge transfer of power and wealth from one part of
10 our society to another.

11 CHAIRPERSON BERRY: And if you add to that
12 that most of the people that are in jail, or many of
13 them, from drug offenses. And that the drugs come
14 from outside their community into the community.

15 MS. HULING: Absolutely.

16 CHAIRPERSON BERRY: So that they can
17 become addicted and sell them, and go to jail for
18 that. Then you've got additional profits being made
19 from outside the community.

20 Indeed, I had never put all these pieces
21 together or even things like if you have a community
22 radio station, you can get money from the CPD for --

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS
1323 RHODE ISLAND AVE., N.W.
WASHINGTON, D.C. 20005-3701

1 if you're a minority station, you get more money. So,
2 if you're in a rural area and you have a prison --

3 MS. HULING: Right. Right.

4 CHAIRPERSON BERRY: -- and you count all
5 the prisoners, then on your application you have
6 enough minorities --

7 MS. HULING: Exactly.

8 CHAIRPERSON BERRY: -- to get more money.

9 MS. HULING: Exactly.

10 CHAIRPERSON BERRY: From the CPB for being
11 a minority station.

12 MS. HULING: Absolutely.

13 CHAIRPERSON BERRY: Whereas the people
14 you're talking about are in jail. A very interesting
15 --

16 MS. HULING: Absolutely. And it goes for
17 Head Start. That goes for any of these other programs
18 based on those kind of demographic characteristics.

19 CHAIRPERSON BERRY: That's really worth
20 exploring.

21 Mr. Mauer, have you thought about these
22 issues that she's talking about?

1 MR. MAUER: Yes, as you may know, we did a
2 report just a few months ago looking at the issue of
3 the loss of voting rights as a result of a felony
4 conviction. And we estimated that currently about 13
5 percent of the African American male adult population
6 cannot vote as a result of a felony conviction. There
7 are 14 states where a person can lose their right to
8 vote for life as a result of a felony conviction.

9 So, for example, in Virginia, nearby, an
10 18 year old convicted of drug possession might be
11 sentenced to go to a treatment program, complete that
12 successfully, never spend a day in jail potentially,
13 and yet he has lost the right to vote for life unless
14 somehow the governor should decide to restore those
15 voting rights.

16 Now, if we look back historically, some of
17 these laws go back 200 years, some of them came into
18 effect in the post-reconstruction period in the south
19 and were specifically tailored to reduce black voting
20 power. It came at the same time as the poll tax
21 literacy requirements. Well, now 200 years later
22 we've done away with the poll tax, literacy

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS
1323 RHODE ISLAND AVE., N.W.
WASHINGTON, D.C. 20005-3701

1 requirement, women can vote, all these restrictions
2 that we view as very archaic now have been done away
3 with, and this is the last remaining restriction.

4 And I think the growth of the system and
5 the enormous numbers that we see now means that the
6 voting restrictions are effecting not just individuals
7 with a felony conviction but the political power and
8 influence of the black community as a whole right now.

9 CHAIRPERSON BERRY: The last question I
10 have is whether what you describe, what all of you
11 have described, as happening to African American,
12 young African American males, should be of concern to
13 anyone except African Americans? I mean, if you tell
14 me that young African American males are committing
15 crime, they're going to jail. And they're in the
16 prison. And rural communities are getting rich off of
17 having them be there. I mean, what is -- so, what is
18 to be said except that if you don't want them to get
19 rich off of you, you shouldn't commit crime, one.
20 And, two, to the persons who are not that concerned
21 about the African American community, so what? That
22 just means so what.

1 So, why should it be of interest to the
2 community at large, or the nation, or anybody, except
3 African Americans as to what is happening to African
4 American males and their being incarcerated or not
5 receiving these services, or all of the things that
6 you have described? Is there any reason at all for
7 anybody to be concerned?

8 DR. JOSEPH: Yes. African American males
9 do not exist in a vacuum. They're part of a larger
10 society and whatever happens to them would impact on
11 the larger white society. Not just in their immediate
12 neighborhood, but in the larger society in general.
13 So people should be concerned. As was mentioned
14 before, they go to prison, yes, they get out. They're
15 coming to live next door to you. I mean, whatever
16 happens to them will in the long run in fact impact on
17 the larger community.

18 And I think we are seeing this as time
19 goes along in terms of jobs, drugs, gangs, and
20 violence in school have actually spread to the larger
21 community. And now there's great concern about these
22 issues because now they're extending into the white

1 community. So, people should be concerned, not just
2 the black community.

3 CHAIRPERSON BERRY: Yes, Professor Dembo.

4 PROFESSOR DEMBO: Not only that aspect
5 which is really important, but also that a society is
6 measured, in an ideal sense, not by how it's most
7 affluent resource people and successful live but how
8 the most -- among the most stressed in a society have
9 available to them opportunities to improve their
10 condition. And what we see here is a degradation of
11 that over time. We do not see any indication at the
12 moment that there is that hope. And we are at risk of
13 creating a nation of enemies. The next generation may
14 have to face that tragic aspect. I hope it never
15 happens.

16 CHAIRPERSON BERRY: Yes, Ms. Huling?

17 MS. HULING: I have two thoughts on that.
18 One is, I think we need to start talking about the
19 way in which the criminal justice system as it's now
20 designed breeds crime. I think that people need to
21 understand that when you have -- and there are certain
22 kinds of symbols that can be used, I think, quite

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS
1323 RHODE ISLAND AVE., N.W.
WASHINGTON, D.C. 20005-3701

1 productively. Private prisons. The prisons for
2 profit. It doesn't take a rocket scientist to realize
3 that in order to keep that industry going, you need
4 more people coming to prison. You need more crimes
5 being committed so that people can come to prison.

6 So, in essence, that is -- we have bred
7 sort of this force. We are allowing this force which
8 is facilitated by increased crime, not decreased
9 crime, to exist and flourish. It's becoming a very
10 powerful force. The average person needs to
11 understand that that force is antithetical to his or her
12 own interests in reducing crime in their own
13 community. So, I would spend some time doing those
14 equations.

15 I forgot the second one.

16 CHAIRPERSON BERRY: That's all right. You
17 might think of it, so I guess the really last question
18 is, what impact does it have on black women, the
19 increased numbers of black women in prison? Is that
20 related to the incarceration of young African American
21 males? Are they related phenomena? Because you
22 know, the number of black women in prison is

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS
1323 RHODE ISLAND AVE., N.W.
WASHINGTON, D.C. 20005-3701

1 increasing. So, do the numbers sort of go together?
2 Are there some relationships here? Or what? Does
3 anybody have any idea?

4 MR. MAUER: I would just say briefly, I
5 think a lot of the same factors are contributing if we
6 look at the sort of confluence of drugs, poverty, loss
7 of legitimate economic opportunities in inner city
8 areas. Just the whole economic and social
9 transformation that's hit inner city areas so hard in
10 the last 20 years I think has impacted on black women
11 in particular.

12 And once they've come into the criminal
13 justice system, in some ways they've sort of gotten a
14 worse deal than even black men in terms of negotiating
15 through the system and access to resources, and things
16 like that. And the numbers are going up very rapidly.

17 CHAIRPERSON BERRY: I just wondered if it
18 was their relationships with black men who get
19 involved in crime?

20 MR. MAUER: I mean, there's a number of
21 celebrated cases, unfortunately, where we get a
22 typical situation. You have a boyfriend drug dealer

1 and the girlfriend who's sort of along for the ride.
2 And she's committed a crime as he has, and she gets
3 punished for his crime and more, very often, too. So,
4 it's the mandatory sentencing has made it worse.

5 CHAIRPERSON BERRY: Yes, yes.

6 Commissioner Lee thought of a question, another one.

7 Real quickly.

8 COMMISSIONER LEE: Mr. Mauer, you
9 mentioned some statistics regarding African American
10 males who murder whites, who had a higher rate of
11 receiving the death penalty. Do you have any data
12 regarding incarceration rates on black versus black
13 compared to -- and I'm not talking about murders, just
14 any way, and black whose victims were white? And
15 also, whites whose victims were black? Three
16 different sets of statistics or data, do you have
17 that?

18 MR. MAUER: It's a good question. There's
19 much less research on that than there is on the death
20 penalty. I think what we do know is several things.
21 One is that race can play a role in a different ways.
22 Sometimes racial bias means that a black offender may

1 get a longer sentence than a white offender would.
2 Sometimes, I mentioned previously, a black victim may
3 be regarded less seriously and so ironically, if it's
4 a black on black crime, the black offender may get a
5 better deal because the black victim is getting a
6 worse deal in that case.

7 I think we do know, too, that a number of
8 studies have tended to look at sort of sentencing
9 practices and looking in court on the day of
10 sentencing and trying to decide if a black burglar and
11 a white burglar are getting similar sentences. And
12 some studies suggest that they are and some studies
13 suggest that they're not. I think that's an overly
14 limited way of looking at it because I think what we
15 know about the criminal justice system is that it's a
16 system based on discretion. And various actors,
17 starting with the police, the prosecutor, the defense
18 attorney, the judge, are making decisions all the way
19 along. So, the odds that the black burglar and the
20 white burglar will even end up in court on the day of
21 sentencing are determined well before that happens.

22 And so, I think we need to look at a

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS
1323 RHODE ISLAND AVE., N.W.
WASHINGTON, D.C. 20005-3701

1 number of different areas and we've seen some bias
2 that's emerged in all of those.

3 CHAIRPERSON BERRY: I want to thank the
4 panel very much. You've been very helpful to us.
5 This has been very informative. And we very much
6 appreciate it.

7 We will recess until 2:00. Is that right?

8 VICE CHAIRPERSON REYNOSO: Yes.

9 CHAIRPERSON BERRY: 2:00 and we will begin
10 the panel on education.

11 Thank you very much.

12 (Whereupon, the hearing was recessed at
13 1:05 p.m. to reconvene at 2:00 p.m. this same day.)

(2:12 p.m.)

CHAIRPERSON BERRY: We will now reconvene.

Could the sign interpreter ask if anyone is in need of interpretation.

PANEL TWO - EDUCATION

CHAIRPERSON BERRY: We'll now have a panel discussion the topic of education. This panel will look at the educational status and progress of young African American men, testing and special education issues, and possible improvements to educational achievement.

And I see that you've already called them forward. And let me begin by introducing them.

We have Dr. Antoine Garibaldi who is the provost -- It says you're the first provost. I guess we didn't call it provost before. And chief academic officer and professor of education at Howard University.

He is a primary author of "Educating Black Male Youth: A Moral and Civil Imperative" which is a report of a New Orleans Public School Commission he

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS
1323 RHODE ISLAND AVE., N.W.
WASHINGTON, D.C. 20005-3701

1 chaired. He is a graduate of Howard University and
2 the University of Minnesota.

3 Our second panelist is Professor Carolyn
4 Talbert-Johnson who is an associate professor at the
5 University of Dayton. And she is also a consultant
6 for the Ohio Department of Youth Services. And she
7 has co-authored several publications, currently
8 awaiting publication of her new book -- we all know
9 how that is -- Preparing Teachers for Diverse Student
10 Populations and for Equity.

11 She is a graduate of Ohio Dominican
12 College and advanced work and a Ph.D. from Ohio State
13 University.

14 Our third panelist is Professor Sylvia
15 Johnson who is the editor in chief of the Journal of
16 Negro Education. She is also the principal
17 investigator for the Center for Research on the
18 Education of Students Placed at Risk, which is called
19 CRSPAR. She's been a professor. She's gone through
20 the ranks at Howard University.

21 She is well versed on the subject of
22 testing and had numerous publications on this issue.

1 And she has been involved in various professional
2 organization on the subject of testing, including
3 National Academy of Sciences panels and the like.

4 She is a graduate of Howard University and
5 University of Southern Illinois with a Ph.D. from the
6 University of Iowa.

7 Let me welcome all three of you and thank
8 you so very much for being willing to help us with
9 this topic.

10 We will begin with you, Provost Garibaldi,
11 and if you could please summarize -- We have your
12 paper. So, if you could summarize your paper for us,
13 to the extent you can in the time available, and then
14 there will be questions later.

15 Please proceed.

16 PROVOST GARIBALDI: Thank you, Dr. Berry,
17 and good afternoon Chairperson Berry and other
18 distinguished members of the United States Commission
19 on Civil Rights, also my fellow panelists and other
20 invited guests.

21 I'd like to thank the Commission on Civil
22 Rights for providing me with the opportunity to

1 participate in this very important and timely
2 discussion on African American male educational
3 issues. Throughout my own 25 year career as an
4 elementary school teacher, a director of an urban
5 league street academy, an research administrator with
6 the U.S. Department Health, Education, and Welfare
7 when, coincidentally, Dr. Berry was Assistant
8 Secretary for Education, at that time I was doing work
9 on suspensions and expulsions from my previous years
10 of experience as an urban league street academy
11 director. But also as a university faculty member and
12 higher education administrator, I have become
13 intimately involved in the many issues associated with
14 the educational achievement and attainment of African
15 American males.

16 Of special importance, I served as the
17 chair with a major study on the status of African
18 American males in a New Orleans Public School System
19 more than ten years ago. And that study's findings
20 were replicated right nearby in the public school
21 district of Prince Georges County, Maryland and also
22 in Milwaukee, Wisconsin's.

1 Well, while there have been many local,
2 state, and national discussion on this topic over the
3 last ten years, my perspectives and philosophy on the
4 reasons for the poor academic performance of many of
5 these young men as well as their notable absence in
6 the higher educational sector and also their minimal
7 educational attainment at all levels of the
8 educational continuum have not changed significantly
9 since that report was released in 1988.

10 Interventions and strategies that have
11 been designed specifically to improve the performance
12 of African American males in America over the last ten
13 years shows some signs of progress. Thus, it is
14 important to improve upon, to replicate, and to
15 promote those initiatives that have been developed to
16 expand the pool of academically successful African
17 American males.

18 To accomplish this ambitious yet realistic
19 goal, however, our society must address the
20 fundamental reasons for the less than satisfactory
21 performance of African American males in elementary
22 and secondary schools, and their low undergraduate

1 numbers and percentages in colleges and universities
2 as well as their representation in graduate and
3 professional schools.

4 Based upon my experiences and some of the
5 studies in which I have been involved, these reasons
6 for the poor academic performance of African American
7 males include the low expectations of African American
8 males' achievement potential, low teacher expectations
9 of males, particularly minority students, insufficient
10 reinforcement of academic success at the lower levels,
11 declining levels of achievement growth beyond the
12 elementary school grades, limited male role models and
13 individuals who could mentor these young men in the
14 upper elementary grades, limited attention to the
15 financial rewards that can be gained by the pursuit of
16 higher educational attainment, and a lack of social
17 support systems in the community and in society in
18 general.

19 During the 1987 - '88 study on the status
20 of African American males in the New Orleans public
21 schools, the results indicated clearly that the
22 majority of students, most of whom were African

1 American in the school district, did want to achieve.

2 But the standards established for them by teachers
3 appeared to be much lower than the expectations for
4 the students. In a survey of more than 2,250 African
5 American males in the school district, 95 percent
6 reported that they expected to graduate from high
7 school. However, 40 percent responded that they
8 believed their teachers did not set high enough goals
9 for them. And 60 percent suggested that their
10 teachers should push them harder.

11 Black males in the -- Black females in the
12 study, I should say, responded similarly to the boys
13 on those items. However, when a random sample of 500
14 teachers were surveyed, almost six out of every ten of
15 the 318 who responded indicated that they did not
16 believe that their black male students would go to
17 college. This finding became even more significant
18 and troubling when the analysis of background teachers
19 revealed that 60 percent of those who responded taught
20 in elementary schools, 70 percent had ten or more
21 years of experience, and 65 percent of them were
22 black. Thus, the opinions, perceptions, and

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS
1323 RHODE ISLAND AVE., N.W.
WASHINGTON, D.C. 20005-3701

1 expectations of teachers impact strongly student's
2 potential academic performance and influence what is
3 taught and what standards are used to gauge students'
4 success.

5 I don't have adequate time to go through
6 all of the data which I have provided here with
7 respect to the progress and also some of the gaps that
8 still exist with respect to African American males and
9 females at the high school, the collegiate, the
10 graduate, and professional levels. But let me just
11 highlight a couple because I think it is important.

12 The first on high school attainment. The
13 high school completion rate for 18 to 24 year old
14 African American males has increased from 62 percent
15 in 1976 to 71 percent in 1996. When we look at the
16 overall average, we find that African American males
17 and females have also significantly improved their own
18 educational attainment at high school, so that more
19 are graduating from high school in 1996 than there
20 were in 1976.

21 When we look at college participation
22 rates, we see very, very clearly that African American

1 males are not going to college at the same level as
2 African American females. African American males go
3 to college at around 35 percent. In the case of
4 African American females, it is more than 40 percent.

5 But the fact of the matter is, many of these students
6 are also finding themselves in two year colleges,
7 universities, as opposed to four year institutions.
8 There is also almost a 300,000 gap of more African
9 American females than African American males, which
10 clearly indicate that we have much work to do.

11 On bachelor's degrees, African American
12 males are receiving more bachelor's degrees today than
13 they did 10 to 15 years ago. But that gap has also
14 widen by almost 24,000 more African American females
15 who received those baccalaureate degrees than do
16 African American males.

17 We look at graduate and professional
18 degrees, the same has occurred. Where African
19 American males used to receive more master's degrees,
20 more Ph.D.'s than did African American females. Now
21 African American females have overtaken that. And
22 the same is holding true for first professional

1 degrees.

2 So, there is much to be done. I think the
3 better part of my paper is the part that really
4 focuses in on some of the solutions and I try to
5 highlight some of the programs around the country that
6 have proven to be very, very successful, supported by
7 the U.S. Department of Health and Human Services,
8 these family life centers which I've been associated
9 with, too. One at Xavier University where I was for
10 15 years and then now at Howard University.

11 These are very, very important programs
12 because they do provide the kind of reinforcement and
13 the kind of attention to success that is indeed
14 possible in the African American community and
15 particularly for African American males. And then
16 there is also a discussion of the Meyerhoff Scholars
17 Program that has proven to be successful. The first
18 four cohorts of individuals, 92 percent of them are
19 not graduating professional schools and this is right
20 here nearby at the University of Maryland - Baltimore
21 County under President Freeman Rabowski's leadership.

22 I think it's positive and I know that my

1 fellow panelists will also focus on this, in that
2 organizations such as the National Urban League are
3 focused on campaigns for high academic achievements.
4 And that is extremely important as we really try to
5 address some of these reasons why African American
6 males are not performing as well as they should in the
7 numbers that they should in many of our school
8 districts as well as our colleges, universities.

9 Thank you.

10 CHAIRPERSON BERRY: Thank you very much.
11 There will be questions later.

12 Professor Talbert-Johnson.

13 PROFESSOR TALBERT-JOHNSON: Madam
14 Chairperson, educators in all segments of the
15 profession are generally focusing attention on the
16 changing profile of the United States national
17 population, and specifically on the changing profile
18 of students in pre-school through secondary settings.
19 Demographers estimate that by the year 2000 a minimum
20 of one-third of the school population will be
21 minority, special need, and economically disadvantaged
22 students.

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS
1323 RHODE ISLAND AVE., N.W.
WASHINGTON, D.C. 20005-3701

1 In contrast, the population of prospective
2 and practicing P through 12 educators remains
3 primarily European American female. The continuing
4 trends of an increasingly greater proportion of
5 minority students in the public school population and
6 a teaching core of largely white females set the
7 occasion for cultural discontinuities that potentially
8 undermine the learning of students and serve to
9 frustrate teachers.

10 Gilbert and Gay, in their research, have
11 identified four areas of potential cultural conflict.

12 The first is learning styles. Are these learners
13 visual, auditory, or kinesetic learners? We have to
14 address the specific mode of learning for these
15 individuals. We have to also be cognizant of the
16 stage setting behaviors that these African American
17 males percent.

18 Secondly, the interactional, or
19 relationship style, misperceived messages, the non-
20 verbal cues that these individuals bring into the
21 environment.

22 Thirdly, communication style. African

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS
1323 RHODE ISLAND AVE., N.W.
WASHINGTON, D.C. 20005-3701

1 Americans spoken language does not always match
2 standard English. For instance, the student that
3 enters the classroom and says, Yo, what it be like. A
4 teacher may have difficulty understanding what that
5 individual is actually saying.

6 And lastly, differing perceptions of
7 involvement. American schools value cognitive
8 involvement. But for African American males, not only
9 are they involved cognitively, they are involved
10 emotionally and physically as well all at the same
11 time. Thus the term hyperactive which we tend to
12 overuse.

13 This paper addresses the over
14 representation of African American males in special
15 education. This over representation is evident in
16 that African American males are placed in classes for
17 mental retardation one and one half times the rate of
18 females, speech impairment services one in three-
19 quarters times the rate of females, severe emotional
20 disturbances/behavior disorder programs three and one-
21 half times that the rate of female. And for services
22 for learning disabilities, two and one-half times the

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS
1323 RHODE ISLAND AVE., N.W.
WASHINGTON, D.C. 20005-3701

1 rate of placement for females. The more subjective
2 the diagnosis, the higher the representation of males.

3 It is possible that teachers could be
4 responding to behavioral problems rather than learning
5 problems. Irvine, in her research, suggests that the
6 attitudes of teachers may impact upon the referral
7 rates for placement of minorities in special
8 education. African American males are enrolled
9 inappropriately in special education classes. They
10 face more limited educational opportunities. They
11 tend to drop out of school and they carry a life long
12 label due to these inequitable opportunities.

13 Researchers cite the areas of
14 identification, referring back to the referral system;
15 assessment, what type of standardized measures are we
16 assessing these individuals with; placement in the
17 least restrictive environment. Are we placing these
18 children in the environment that's appropriate for
19 their functioning level? Individualized education
20 instruction and adaptation to change and reform as
21 adversely impacting the education needs of minorities.

22 Teacher preparation programs should

1 prepare prospective teachers to work with minority
2 populations. If the curricula presented to
3 prospective teachers fails to address the needs of
4 those culturally different from themselves, this
5 supports the cultural mismatch theory which suggests
6 that different groups have communication and learning
7 styles that do not fit with the mainstream styles
8 usually found in the classroom.

9 The future agenda. Improved opportunities
10 for minority students will rest in part on policies
11 that professionalize teaching by increasing the
12 knowledge base of teaching. A teaching core of
13 qualified individuals must be trained to respond to
14 how students learn.

15 There are no simple solutions to the
16 problems of the disproportionate placement of African
17 American males in special education. However, several
18 areas should be addressed including, (1) recruitment
19 and retention of minority teachers. Recruitment of
20 minority educators continues to be a major crisis in
21 teacher education. Minority faculty should be
22 vigorously recruited to assist prospective teachers in

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 maximizing the fit between instruction and students
2 learning, regardless of racial or ethnic groups,
3 gender, or social economic background. Minority
4 educators act as role models for all students.

5 Two, preparation of teachers for urban
6 settings. Student learning can be enhanced through a
7 teacher's awareness and knowledge of cultural
8 differences. Curriculum development should be a
9 dynamic process, one in which culturally sensitive
10 curriculum and instruction are adopted. Field
11 experiences should include rural, suburban, as well as
12 urban settings. Teacher preparation programs must be
13 designed to help prospective teachers critically
14 examine their own assumptions, expectations, and
15 perceptions of minority children.

16 A colleague and I just completed a study
17 in which we surveyed prospective teachers. And one of
18 the things we were trying to discern if the histories,
19 the past experiences, of these individuals had a
20 profound effect on their future employment choices and
21 decisions. What we found is that teachers who evolve
22 from suburban districts wanted to return to those same

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS
1323 RHODE ISLAND AVE., N.W.
WASHINGTON, D.C. 20005-3701

1 districts to teach. So, suburban areas were the
2 number one response. Second, rural areas and then a
3 far third were those who wanted to teach in urban
4 settings.

5 The reasons cited for not wanting to teach
6 in urban environments included fear, crime, too much
7 violence in the school, lack of structure, and one
8 individual based on one semester's experience shared,
9 "I do not want to teach in urban settings because
10 there are too many injustices in that setting.
11 Besides, my dad said I can't teach in those schools."

12 Recognizing and valuing all learners is
13 the third suggestion. Schools should be important,
14 empowering environments for all students. It is
15 critical to remember that children are first and
16 foremost children. Therefore, within schools,
17 students need to feel welcomed and valued, and they
18 should be given the opportunity to develop a sense of
19 competence, youthfulness, and belonging. A teaching
20 professional who is cognizant of the communication,
21 learning, and behavioral styles of minority students
22 can appreciate their impact upon a student acquisition

1 of information and can better develop curriculums and
2 learning materials that are congruent with the
3 individualized needs of these individuals.

4 Lastly, determining the best practices to
5 improve student learning. Bowson and Villa, in their
6 research support that statements of best practice
7 should include, but are not limited to, teacher-
8 student interpersonal contacts, teacher and student
9 expectations, social integration, transition planning,
10 curricula expectations, home school partnerships, and
11 systematic programs evaluation.

12 Finally comment. A pressing national
13 concern is to prevent the high proportions of failure
14 and misrepresentation among students from diverse
15 racial, ethnic, and social economic backgrounds.
16 Inequality in learning has to be rely on policies that
17 provide equal access to competent, well supported
18 teachers. The educational system ought to be able to
19 guarantee that every child who is required by law to
20 go to school is taught by someone who is prepared,
21 knowledgeable, competent, and caring.

22 Schools should embrace the diversity of

1 the student body, respecting and appreciating the rich
2 ethnic and cultural differences in an environment that
3 is safe and conducive to students' learning styles and
4 needs.

5 CHAIRPERSON BERRY: Thank you very much,
6 Professor Talbert-Johnson. And there will be
7 questions later.

8 Dr. Johnson.

9 DR. JOHNSON: Thank you, Chairman Berry,
10 members of the commission, staff, and guests.

11 I'm very pleased to have been asked to
12 address this vital topic before the Civil Rights
13 Commission. My paper is entitled, "Assessment and the
14 Educational Progress of African American Males." And
15 I'd like to introduce first my co-author, Mr. Michael
16 Wallace.

17 Michael, you want to stand up.

18 The educational progress and development
19 of urban African American males in the United States
20 as measured by standardized assessments is a matter of
21 serious national concern. Although there are
22 substantial variability among their scores, it has

1 been well documented that African American men, on the
2 average, have performed considerably less well
3 academically than other groups of young Americans.

4 Any student of the educational odyssey of
5 African Americans in this country is bound to be
6 struck by the many obstacles to educational progress
7 that co-existed with the many attempts to facilitate
8 their progress. At the time that abolitionists,
9 religious groups, and free blacks struggled in the
10 early years of the republic to educate people of
11 color, it was illegal in slave states to teach an
12 African American to read and some paid for this
13 knowledge with their lives.

14 Despite the light years of progress since
15 that time, the co-existence of impediments and
16 facilitator, though very different in expression from
17 that earlier time, is still a feature to be considered
18 in understanding educational progress among this group
19 and performance on testing and assessment measures of
20 that performance.

21 I'm going to comment on test performance
22 at a variety of levels and the relationship of these

1 measures to one another and how they have moved over
2 time, and also how they predict future performance.
3 I'll begin with standardize test performance in
4 elementary and high school.

5 The National Assessment of Educational
6 Progress, or NAEP, reports the progress of American
7 students in the fourth, eighth, and twelfth grades.
8 Now, currently published NAEP reports don't delineate
9 gender within ethnicity so I'll be talking about, in
10 these NAEP results, males and females combined.

11 The NAEP results in mathematics show
12 strong improvement equal to about half a standard
13 deviation for black students at age 9, 13, and 17 from
14 1973 to 1990. But then, from then until '96, progress
15 in mathematics was mixed with a slight decrease in
16 average performance for 17 year olds. The NAEP
17 science and mathematic scores have mixed trends. But
18 overall, black students have shown substantial
19 progress.

20 In general, the trend lines and NAEP
21 results from black students have shown greater gains
22 than the trends for white students with a result of

1 the gaps between the scores of white and black
2 students were smaller in 1996 in most subject areas
3 than they had been in 1971 or 1973.

4 The NAEP -- the most recent NAEP report
5 notes the need to consider a number of factors when
6 interpreting achievement differences between
7 subgroups. They note that the research indicates that
8 many minority students attend schools with substandard
9 physical facilities, fewer academic resources, less
10 challenging curricula, and thus, their opportunities
11 to learn are limited. They also note the
12 disproportionate placement in low ability classes and
13 the provision of less intensive curricula that many
14 writers have noted.

15 Until recently, or more recently,
16 researchers have looked at the NAEP data from a
17 perspective aimed at examining the factors most
18 related to score differences. Using structural
19 equation models on a hierarchy of variables, Rodenbush
20 and his colleagues have found that when differences
21 between the average state scores of states on the NAEP
22 trial assessment are examined, these differences are

1 found to be strongly related to differences in
2 resource allocation and availability.

3 Minority students and students whose
4 parents had lower levels of education were found to
5 have less access to course taking opportunities,
6 favorable school climates, highly educated teachers,
7 and cognitively stimulating classrooms. The strength
8 of this relation varied across the states which could
9 provide an alternate index to the current NAEP report
10 card for reporting the relative educational progress
11 of students in subgroups within the states. Such an
12 approach could be every useful in structuring policy to
13 advance educational progress for all groups.

14 With another hierarchical model, Finn and
15 Achilles analyzed the Tennessee school size experiment
16 data in which students were randomly assigned to small
17 or medium sized classes in grades 1 to 3. All
18 students gained in the small classes but black
19 students gained most, nearly a third of a standard
20 deviation. And these changes carried over for
21 testing, the most recent testing, in the seventh
22 grade.

1 Academic outcomes for black students are
2 also influenced by teachers' perceptions and teachers'
3 responses to them. And teachers' attitudes. The
4 complex relationship between test scores, race, and
5 instruction is examined in a study that examined the
6 performance -- examined the perceptions of teachers of
7 a number of the tests, commonly used tests, used
8 across the country during the elementary and high
9 school grades.

10 This survey of over 2,000 mathematics and
11 science teachers in high and low minority classes
12 found the teachers of high minority classes were more
13 likely to report negative impacts of standardize
14 testing on teacher practice and minority student
15 achievement in mathematics and science.

16 Dr. Talbert-Johnson has already commented
17 in terms of special education and I won't go on into
18 that area. There are some positive impacts of testing
19 on teaching and learning. The Equity 2000 program of
20 the College Board which aims at having students
21 complete algebra by the ninth grade and thus be able
22 to take more advanced work in the tenth, eleventh, and

1 twelfth grades, and also be encouraged to take other
2 non -- other college preparatory work that might not
3 have been a part of their earlier plans.

4 Findings indicate outstanding success in
5 increasing the proportion of students taking algebra
6 and these findings were for entire school systems
7 which is very vital, not just a school. And it
8 includes a range of safety net strategies such as
9 Saturday school, tutoring, professional development.

10 And a very vital factor was professional development
11 for counselors, administrators, and teachers so that
12 they would not only educate students towards these
13 goals but also expect that they would be able to do
14 well.

15 The expectations that students have for
16 themselves as well as those expectations that others
17 have for them are vital in terms of test performance.

18 Many students take the ACT and SAT tests
19 for admission to college. And the progress of black
20 students, the scores of black students, are lower.
21 And black males are lower in terms of the SAT
22 examination. But the more background that students

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS
1323 RHODE ISLAND AVE., N.W.
WASHINGTON, D.C. 20005-3701

1 have in terms of high school preparation, the higher
2 the test scores. For example, black male SAT test
3 takers received average scores of 546 and 557 on the
4 verbal, math, SAT 1 tests when they had taken --
5 those students that took the SAT 2 test, that is,
6 those students that took those advanced achievement
7 tests, received scores of 547 and 557 on the SAT 1
8 test, which are considerably higher than the verbal
9 and math scores for students in general across the
10 country.

11 Taking the PSAT prior to the SAT also
12 improved scores several points and students who had 20
13 years or more of academic subjects in high school such
14 as four years of English, math, lab, science, foreign
15 language, and social studies, did much better.

16 So, we must improve the kinds of
17 backgrounds that students have. I'm going to have to
18 just jump to the end here. And essentially, we can
19 draw from this test information in terms of the crisis
20 of the urban African American male.

21 It's clear that a total reliance on tests
22 for selection results in greatly limiting the

1 opportunities for this group from early opportunities
2 to learn in elementary and high school, to the
3 opportunities that are later contingent to these
4 learning experiences. The multiple societal forces
5 that effect black males, their families, and the
6 school learning experiences need to be addressed. And
7 the climate for learning effectively improved in all
8 of our schools, in all of our cities. An approach is
9 needed that is educational, economic, and political in
10 order to make the massive changes needed.

11 The positive side is that nearly all of
12 these tests scores show positive improvement over time
13 but much, much more is needed to effectively use the
14 important talents of African American men an to
15 adequately open the upper levels of employment,
16 education, and income to them.

17 Thank you.

18 CHAIRPERSON BERRY: All right. Thank you
19 very much.

20 Do commissioners have questions? I bet
21 you do.

22 VICE CHAIRPERSON REYNOSO: I always have

1 questions.

2 I want to explore the -- where
3 intervention can make a difference. And I assume it
4 can all the way along the lines but there are certain
5 critical zones, apparently.

6 Dr. Garibaldi, we read materials in
7 preparation for this hearing and heard testimony
8 earlier today, that in grammar school, African
9 American males do well in kindergarten apparently, in
10 the first grade, in the second grade. And they start
11 getting in trouble in the third and fourth grade. And
12 I must say that certainly my view personally as an
13 educator is that if you start getting in trouble at a
14 certain grade, unless you get out of trouble, that
15 will just get worse as you go along.

16 So, my first question is, does -- and if
17 the rest of you have information on that, I'd be happy
18 to hear it. But, one, do you agree with that
19 testimony? If so, what causes it? And three, most
20 importantly, what can be done about it so that
21 youngsters don't start falling behind?

22 PROVOST GARIBALDI: Right. I would

1 certainly agree that the third to fourth grades are
2 very, very critical years. A number of studies --

3 VICE CHAIRPERSON REYNOSO: Excuse me.
4 These are presumably smart kids because they don't
5 have trouble in first and second.

6 PROVOST GARIBALDI: Absolutely.

7 VICE CHAIRPERSON REYNOSO: Then they start
8 having trouble. So, it's not a brain. It's not
9 academics. It's something else.

10 PROVOST GARIBALDI: Right. Something
11 certainly begins to happen around third and fourth
12 grades. And I think a number of studies have shown,
13 just as Dr. Johnson has pointed out a few minutes ago,
14 that around the age -- not the age, in third, fourth
15 grade, you begin to see patterns of regression in
16 terms of reading, in mathematics performance and the
17 like.

18 Certainly there are some factors there
19 such as peer influences that are becoming a part
20 there. But I also think it's an opportunity for
21 teachers to take a very, very active role in making
22 sure that students are reinforced and that the

1 standards that are set within the schools are placed
2 at the highest level.

3 I was interested in that in the New
4 Orleans Public School study, and I was quite -- quite
5 surprised but pleasantly surprised, that the same
6 thing had happened, the Prince Georges County study,
7 and also in the Milwaukee study. So, this was not
8 something that was really out of the ordinary.

9 I think that that's a critical point where
10 intervention is needed. As well as at the middle
11 school grades.

12 VICE CHAIRPERSON REYNOSO: And oft times,
13 and I'm sure there's, certainly out of personal
14 experience, there's a basis for criticizing the home
15 for not providing the proper encouragement and all
16 that. Nonetheless, the home is the same whether the
17 youngster is in first, second, third, or fourth grade.

18 And yet, how come they do okay in public schools one
19 and two, but start getting in trouble in two and
20 three?

21 PROVOST GARIBALDI: Right. Well, I don't
22 want to put my fingers there and start blaming too

1 many individuals. But you've heard what I have to say
2 about what teachers had to say about the potential
3 college going for African American males. Why is it
4 that these young people have clear signs, clear
5 indications, that they do want to go to college but
6 yet when we asked teachers what do they believe, then
7 we find that they are as much influence by the
8 perceptions, the societal perceptions, about these
9 young men at an early age that it should cause us all
10 to be alarmed. And we have to make sure that that
11 does not happen.

12 Those self-fulfilling prophecies are
13 internalized by these young people and I begin -- and
14 they begin to see their lower grades. And
15 unfortunately, unless there is somebody to really pull
16 them from that point, they're not going to be
17 reinforced and their active performance is going to
18 lag even more after that point.

19 PROFESSOR TALBERT-JOHNSON: I would like
20 to make a comment, too, if I could. I kind of agree
21 with what Dr. Garibaldi is saying.

22 I think the teacher can have a profound

1 impact upon the behaviors of these individuals. I
2 think what we see in the primary grades, from K to
3 about 2 you see a lot of rote memorization. As
4 students age, we start to utilize, or should be
5 utilizing, more diverse techniques. And in that area,
6 it goes back again to what we alluded to earlier about
7 the learning styles. If we are not addressing those
8 learning styles, then those individuals I think are
9 going to start turning off, becoming more active, if
10 you will, regarding their behavioral concerns. And
11 because they're having difficulty with their
12 behavioral characteristics, that can have a profound
13 impact on the academic or the learning --

14 VICE CHAIRPERSON REYNOSO: They end up in
15 the programs that -- special education programs you
16 were describing.

17 Let me shift from grammar school. And I
18 just picked up that was sort of at a critical issue.
19 Some youngsters then get to high school and have not
20 learned, at least at reading level and substantive
21 level as would be expected. And yet, we have a lot of
22 efforts at high school to help those youngsters.

1 Assume, Dr. Johnson, that you take the
2 standardized test and the youngster ends up, instead
3 of being at the ninth grade level, at the seventh
4 grade level. What should an institution do? What
5 intervention is there, then, at that level?

6 I teach at the graduate level. I teach at
7 the law school. And so, we get the youngsters at the
8 very end of the educational experience. And I was
9 told a year ago, it's probably still true, that males,
10 that African Americans, males and females, who too the
11 law school admissions test that in the whole country,
12 only about 44 of those test takers would be eligible
13 on numbers alone to be admitted to a school like UCLA.

14 I mean, that's a phenomenally small number.

15 So, we see the students at the end of that
16 educational process. Any failure in between is going
17 to make that one or two, or three percent difference
18 in the LSAT and that's good enough or bad enough to
19 knock them off from being eligible to go to the top
20 law schools, which I think is a crime in the country.

21 So, my question is, what can, then, be --
22 what can be done, what should be done, at that level?

1 DR. JOHNSON: As a former member of the
2 LSAT audit committee in terms of looking at the test,
3 I can say that admission to law school ought to also
4 include a number of non-test factors.

5 But in terms of --

6 VICE CHAIRPERSON REYNOSO: We would all
7 agree with you and until we had a proposition in
8 California, we not only took other factors, we took
9 race, ethnicity, and so on, into account. And now we
10 can't.

11 DR. JOHNSON: But in terms of what to do,
12 in terms of the situation that you posed of the
13 student who's scoring below the grade level, I'd say
14 that one needs to bring that performance up. But at
15 the same time, keep that student working in work that
16 is on the grade level where he is. That is, if he's a
17 ninth grader, he should be able to -- he should be
18 encouraged and given algebra, a standard ninth grade
19 curriculum with perhaps some extra support or Saturday
20 schooling or tutoring in terms of moving on --

21 VICE CHAIRPERSON REYNOSO: On reading or
22 whatever they're --

1 DR. JOHNSON: Yes, in terms of continuing
2 on and building his skills.

3 But, if he is -- if you focus and put his
4 whole program on that, then he's not going to be in
5 any position to move ahead in tenth, eleventh, and
6 twelfth grade, and be ready for the challenges when he
7 completes high school in terms of moving on to
8 college, moving on into work, or into whatever
9 training program he wishes to choose. Because he's
10 going to be penalized for if not a lifetime, certainly
11 a long time if he doesn't get a chance to stay and
12 move on with the -- so that he completes his high
13 school with an appropriate background.

14 VICE CHAIRPERSON REYNOSO: And let me ask
15 the final question, and maybe the answers are the
16 same. But even after grammar school and high school,
17 still many youngsters make it certainly to the junior
18 college system in California, some directly to the
19 university system. The leader of the lower house in
20 California now, a Latino gentleman, says that he was
21 admitted to UCLA when he had a grade point average of
22 1.4 or 2.4 I guess. Is 2 a C? 2.4. He says, I may

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS
1323 RHODE ISLAND AVE., N.W.
WASHINGTON, D.C. 20005-3701

1 have gotten in the back door but I got out the front
2 door, he says.

3 And now I think we require something over
4 a 4.0 average. I don't understand how people get over
5 perfect grades but apparently they do. We have a
6 system for giving people grades over perfect.

7 So, once you get to college, now, we get
8 youngsters there who, again, test out at not being yet
9 at college level. And some colleges are now saying we
10 shouldn't be in the business of bringing people up to
11 college level. But the reality is, at least for now,
12 many colleges are. Again, I guess I ask the same
13 question. Even there, what do we do to bring those
14 youngsters up to college level so they can then
15 compete for graduate school?

16 DR. JOHNSON: Colleges -- as quiet as it
17 is kept, the colleges and universities in this country
18 have always had programs to bring students up to the
19 level that they need to be in terms of carrying out
20 college work from the earliest years of the republic.

21 So, it's -- I think that what is necessary
22 is a college curriculum, but again with rigorous work,

1 additional work, that students are told this work
2 needs to be done to put you in a position to move
3 forward. It's a challenge. It's more -- you're going
4 to have more to do than most students do. But this is
5 what has to be done if you want to move on. And that
6 students can then take a hold and -- or not take a
7 hold, but hopefully take a hold and move on through
8 with the work that needs to be done.

9 PROVOST GARIBALDI: I just want to say I
10 agree wholeheartedly with what Dr. Johnson has said
11 but I also think that colleges, universities, have to
12 get more involved with schools as a way to make sure
13 that --

14 VICE CHAIRPERSON REYNOSO: K through 12?

15 PROVOST GARIBALDI: K through 12, to make
16 sure that students who do consider, or who will apply
17 and enroll at our institutions, are indeed prepared
18 for the kind of academic work that they will take.

19 VICE CHAIRPERSON REYNOSO: Thank you,
20 Madam Chair.

21 PROFESSOR TALBERT-JOHNSON: I'd also like
22 to say at the university we have mentoring services

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS
1323 RHODE ISLAND AVE., N.W.
WASHINGTON, D.C. 20005-3701

1 that are available for those who are having
2 difficulty. And I think that's quite valuable. We
3 also have tutorial sessions for those individuals.

4 But I think those of us who are trainers
5 of teacher have to take it personally and address
6 these needs. When we see that we have students that
7 are having difficulty, if they're not willing to come
8 to us, which is not uncommon for many of our minority
9 children, then we have to go to them and say, look, I
10 notice you're having some difficulty. Let's see if we
11 can address this.

12 VICE CHAIRPERSON REYNOSO: Thank you.

13 CHAIRPERSON BERRY: Commissioner Lee.

14 COMMISSIONER LEE: Previous members on the
15 earlier panel, and you have also mentioned, that there
16 is a lack of role models, male role models, for the
17 kids. And you also mentioned the need for encouraging
18 and training young African American males to go into
19 higher education so they could be professionals and
20 teachers. Now, given the current climate of the
21 entire affirmative action movement, not only are they
22 saying that they shouldn't -- we shouldn't even help

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS
1323 RHODE ISLAND AVE., N.W.
WASHINGTON, D.C. 20005-3701

1 them along in college, they're saying that they
2 shouldn't belong to the college system.

3 How -- I'd like your comments on the Bach
4 study when they did a 20 year study on tracking
5 African American students who went to college and how
6 they had responded through post-graduate studies and
7 stuff. Share some of your comments on that, please.

8 DR. JOHNSON: Yes. I'll begin with that.

9 Yes, that was a -- was a very interesting study by
10 the two former Ivy League presidents using that large
11 database of students entering 28 highly selective
12 colleges and universities in 1976 and 1989. They
13 found that their test scores on the average were lower
14 than those of white students, that there was quite and
15 overlap and some white students were admitted with
16 scores at the lower end of the distribution for black
17 students. The graduation rates and mean grade point
18 averages were lower but black students earned advanced
19 degrees at rates higher or equal to that of their
20 white classmates and then went on to become community
21 leaders and enjoy remarkably successful careers.

22 They became, and I think the quote that I

1 have in the paper is they became "the backbone of the
2 emerging black and Hispanic middle class."

3 So, related to that point, too, is some
4 data from the Baccalaureate and Beyond Longitudinal
5 study which notes that even though black students
6 entering colleges, this was in degreed recipients in
7 '92 and '93, even though they had lower SAT scores and
8 ACT scores when they entered college, these students
9 when they graduated, their cumulative undergraduate
10 grade point averages, placed 11.3 percent of them in
11 the category 3.5 and above, and 34 percent of them in
12 the category from 3.0 to 3.5. So, even though -- and
13 that was about half the students.

14 So, even though they had had somewhat
15 lower test scores on entry, half of them were at the
16 level of 3.0 or higher when they finished college in
17 this particular -- and this is a -- the Baccalaureate
18 and Beyond longitudinal study so it's a sizable
19 sample.

20 PROVOST GARIBALDI: I would add to that by
21 saying that there are a number of factors that really
22 should be considered in admission decisions, not just

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS
1323 RHODE ISLAND AVE., N.W.
WASHINGTON, D.C. 20005-3701

1 the test score but also these other facts.
2 Particularly grade point average which tends to be a
3 much better predictor for minority students than do
4 test scores. Particularly the SAT or the ACT. There
5 are other factors as well, student participation in
6 certain types of extracurricular activities. It
7 certainly does show a student's competence level and a
8 student's ability to move on.

9 I've look at the issues on affirmative and
10 action and how they're likely to impact African
11 American students as well as other students in this
12 country and it's very, very clear that with 3,600
13 colleges, universities, out here, that there are lots
14 of opportunities for many individuals to attend
15 college. And we have to make sure that that is still
16 very much of a possibility.

17 An institution like Dr. Johnson's and my
18 institution, Howard University, we're one of only 100
19 plus historically black colleges, universities, in
20 this country. We enroll 15 percent of African
21 American students. We graduate 28 percent of all
22 African American students who receive their

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS
1323 RHODE ISLAND AVE., N.W.
WASHINGTON, D.C. 20005-3701

1 baccalaureate degrees each year. And the last National
2 Academy of Sciences report for the African American
3 graduates between the years of 1992 and 1996, that
4 five year span, shows that the baccalaureate origins
5 of those students, of the top 18, 11 of those
6 institutions were historically black colleges and
7 universities.

8 So, there are lots of opportunities, there
9 are lots of places, that might not accept some of
10 these students. And I'm not saying that historical
11 black colleges only selects a certain group. Not by
12 any means. There's a wide range of ability levels.
13 But it's what goes on at the institution that truly
14 conveys what is indeed possible at the end of that.
15 And that's why I say, even if a student does not go to
16 college at the end of high school, that student should
17 still have that option and that opportunity up to the
18 twelfth grade.

19 COMMISSIONER LEE: I have one more
20 question.

21 A couple of years ago in an effort to
22 improve education of its students in the Oakland area,

1 the Oakland school board had -- wanted to do the
2 ebonics instruction program. And it was shot down
3 because of public outcry and whatever. I'd like your
4 take on that. How do you feel about teaching young
5 African American students ebonics?

6 PROVOST GARIBALDI: Well, I think there's
7 -- I think, first of all, there was a misunderstanding
8 about what was really being attempted. So, I have to
9 say that having sat in the panel that was in front of
10 Senator Spector a few years ago.

11 The message really was that there has to
12 be an understanding. I think it goes back to what Dr.
13 Talbert-Johnson said. It has to be an understanding
14 that there are different cultures, that there are
15 different ways to communicate. The very point that
16 she said of a student walking into a classroom, you
17 know, walking in, saying, yo, you know, how would it
18 be. You've got to understand what's really going on
19 there and to know that someone is not being profane
20 and they're not insulting you. And you have to be
21 able to at least understand that. That's certainly
22 something that has to go on.

1 In pre-service teacher situations as well
2 as in in-service teacher situations, many individuals
3 in this country are bilingual. Some of them are
4 trilingual. There are lots of different kinds of
5 messages and understanding. But I did not -- I did
6 not read what was being promoted as this is what we
7 were going to teach the students and this is what was
8 necessary in order to succeed. I think that every
9 student has to understand what the standard language
10 is and what the standard mode of communication is, but
11 that student does not have to dismiss his or her
12 cultural backgrounds or those other kinds of things
13 that form a part of that.

14 VICE CHAIRPERSON REYNOSO: May I ask a
15 question in that regard? I had understood the
16 proposition in Oakland as you did. But I can't tell
17 you how many talk show call in programs I heard while
18 on the radio, how many politicians, how many other
19 folks said, can you believe it. These folk are saying
20 that youngsters should be taught this foreign language
21 instead of standard English.

22 My question to you is, why all that

1 misunderstanding? It's rather peculiar to me that
2 somehow all those folks somehow misunderstood, or
3 understood the proposal differently than I did and
4 that you did?

5 PROVOST GARIBALDI: Well, I mean, only to
6 be humorous, I would say that was a perfect example,
7 Commissioner, of the lack of communication and the
8 lack of understanding that there was about what was
9 being proposed. I heard it clearly the more I began
10 to read what the proposal was but I think that most
11 individuals did hear only what the talk show hosts
12 were saying and what critics of the proposal were
13 saying. But no one really went to the proposal to
14 understand what the teachers were saying.

15 COMMISSIONER LEE: Actually, the proposal
16 was very clear. Everyone knew what it was. It's just
17 that within the week, the media and the public just
18 got it completely turned around. So, the whole thing
19 got shut down.

20 Thank you.

21 PROFESSOR TALBERT-JOHNSON: I'd like to
22 respond also. I've had graduate students -- I vividly

1 remember one class that challenged me about that very
2 issue. And she said, I feel we -- her position was
3 that we do these children a disservice if we try to
4 change what they're learning in the community or the
5 home environment. And I told her one of the things as
6 educators is that we're preparing these individuals
7 for life. We're preparing them so that they can
8 transition into society to become independent
9 functioning members of society. That type of language
10 is not going to be acceptable and we have to train
11 children so that they can generalize the basic. But
12 if we're going to impair them or impede their
13 progress, then I think we do a disservice to those
14 individuals.

15 DR. JOHNSON: No, we -- I think that we
16 want students to see themselves as good learners.
17 That is, their self-perception of themselves needs to
18 be as a positive and successful learner. The language
19 that they bring to the school with them is one of the
20 devices that we may use as we encourage and build on
21 their assets. It's not that we're going to teach them
22 that language but we're going to recognize that that's

1 what they may be comfortable in doing initially. And
2 use that strength and that -- the color and beauty,
3 and some of the sounds as you move on and develop
4 their extensive skills in a variety of areas.

5 VICE CHAIRPERSON REYNOSO: Isn't it true
6 that we use languages differently? The words and so
7 on that we use at home are different than the words
8 that we use in an academic setting or in a business
9 setting. And folk ought to feel free to, in a setting
10 of friends or neighbors, or family, to use one
11 language, if you will, or different terminology. But
12 that doesn't mean they can't learn to use yet other
13 terminology in a different setting?

14 CHAIRPERSON BERRY: This -- I happen to be
15 very familiar with the ebonics discussion because the
16 proposal was announced -- I didn't know anything about
17 it, but by two days later when the media had taken off
18 with it, I happened to be one of the people asked by
19 the superintendent out there in some conference calls
20 to try to help them figure out what to do about the
21 media onslaught. This was after it had happened, not
22 before. So, I have some familiarity with those

1 terrible times.

2 And I guess this whole discussion that
3 we've had here about education has depressed me. I
4 was -- I was kind of depressed anyway just with the
5 crisis among young African American males. And I was
6 depressed by the prisons and everything else I heard.

7 Now I'm even more depressed. And I'm not only
8 depressed, I'm confused.

9 I read the papers. I listened to the
10 discussion. I listened to the questions. And now i'm
11 just hopelessly confused. And the reason why I'm
12 confused is because everything that has been said here
13 is all connected to everything else that was said
14 here. And all the things that are wrong, all
15 connected together. It's just one wrong thing leading
16 to another wrong thing. And it seems hopeless to try
17 to disentangle them.

18 And what basically has happened is that
19 the experience of young African American males with
20 education, as you've described it, is like an inverted
21 funnel. There are a whole bunch of young African
22 American males in the beginning learning and doing all

1 kinds of things. And then by the time you squeeze up
2 to the top through the hole, there's like two left, or
3 three, or something. And something happened to the
4 rest of them somewhere between when they entered and
5 when they got out.

6 And Kenneth Clark told us years and years
7 ago in Dark Ghetto that the American educational
8 system was one in which young black children in our
9 urban environments, in the ghetto, as he called it,
10 the poor ghetto, got to learn less the longer they
11 stayed in school. Like, they seemed to know more when
12 they started. And the longer they stayed, the worse
13 they got. And so, the question was, what was
14 happening to make them worse? And I guess we're still
15 asking the same question today.

16 Also, when I say everything is connected,
17 in reading your paper, Dr. Johnson, you point out that
18 there's a correlation between scores on SAT 2 I guess
19 it is, and income, if I read that right. And you also
20 point out that of course what one makes on test
21 scores, standardized test scores, has a relationship
22 to what educational opportunities are offered which

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS
1323 RHODE ISLAND AVE., N.W.
WASHINGTON, D.C. 20005-3701

1 has a relationship to what employment opportunities
2 are offered. So that everything is connected to
3 everything else. So, if you miss out on one, then you
4 miss out often down the line.

5 So that the connections between all these
6 things, that's bothersome. I want to begin. I've got
7 a few questions. First of all, let's start at the top
8 of the funnel.

9 Dr. Garibaldi, what is it about the
10 Meyerhoff program that you talked about, what is that
11 works to make young African Americans who are going to
12 college, who come from female headed households, who
13 are poor, if it's described that way, what is it that
14 they do to people to treat the condition that ends up
15 with success instead of failure?

16 PROVOST GARIBALDI: Well, Madam Chair, I
17 think that there are a lot of things. I think one of
18 the most important ones is that social support that
19 students get as a part of being a part of that cohort.

20 They indicate also the important role that parental
21 support plays in that, the reinforcement of students
22 to continue to succeed in spite of the odds that might

1 be available to them. This is interesting because of
2 the fact that this is really focused on science,
3 engineering, and mathematics where only 2 percent of
4 African Americans are represented in those
5 disciplines, particularly at the graduate and a
6 professional level.

7 So that what happens once a student gets
8 to the institution is really developed over a longer
9 period of time. There are a lot of special support
10 programs that are provided these students but these
11 students are also developed in such a way that they
12 can succeed and that they can indeed reach their goal.

13 CHAIRPERSON BERRY: But what do they give
14 them, down to nuts and bolts level? What is it they
15 're giving or doing to these students?

16 PROVOST GARIBALDI: Well, I think a lot
17 of--

18 CHAIRPERSON BERRY: So that we can do it
19 or give it to the rest of them?

20 PROVOST GARIBALDI: Well, I think a lot of
21 it has to do with really developing that self concept
22 and making sure that students are indeed very, very

1 strong, very, very confident that they can indeed do
2 the work if they want to continue to pursue those
3 particular disciplines.

4 What we find nationally in science,
5 engineering, and mathematics is that students enter in
6 the first year and by the second year very often they
7 change their major for a lot of reasons. And this for
8 -- this is really for all students. This is really
9 focused on increasing a critical mass of students.

10 This is really focused on increasing a
11 critical mass of students. And it's as much talking
12 about nurturing that individual's development.
13 Clearly, all of these students come in with different
14 ability levels but they all can indeed succeed. I
15 think --

16 CHAIRPERSON BERRY: So, they have mentors.
17 They have advisors. They try to replicate a familial
18 network.

19 PROVOST GARIBALDI: Correct.

20 CHAIRPERSON BERRY: For the student.

21 PROVOST GARIBALDI: Correct.

22 CHAIRPERSON BERRY: On the campus. And

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS
1323 RHODE ISLAND AVE., N.W.
WASHINGTON, D.C. 20005-3701

1 have that be the support network throughout their
2 experience there. Is that correct?

3 PROVOST GARIBALDI: That's correct.

4 CHAIRPERSON BERRY: So that if that
5 program works, and it seems to, if we were to do that
6 with all the other "at risk" students, or whatever the
7 terminology is, then that might work for the rest of
8 them?

9 PROVOST GARIBALDI: I certainly believe
10 that it can be successful. I think that there are
11 lots of programs around the country, not just with
12 students at that particular ability level, where those
13 programs work. Just as we talked about students enter
14 college at very different levels, we always like to
15 make sure that students have the kind of orientation
16 when they get into college or a university to make
17 sure that that student is going to succeed and have
18 the same kinds of opportunities as other students.

19 So, making sure that students know where
20 the academic support systems are. I mean, there are
21 many young people in this country, unfortunately, who
22 come into college with very, very high SAT and ACT

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS
1323 RHODE ISLAND AVE., N.W.
WASHINGTON, D.C. 20005-3701

1 scores who do not do well during the first year, the
2 first semester, because they cannot adjust to college
3 life. They have not been properly trained and
4 prepared. They don't know where all of these
5 different support systems are.

6 And I believe that they truly can be
7 successful as we've seen some of those programs work
8 at the elementary and the secondary level. Whether
9 they're in school programs or even after school
10 programs, or weekend type programs.

11 CHAIRPERSON BERRY: Are black colleges
12 still more successful at educating black students than
13 are predominately white four year institutions in
14 terms of graduation rates and all that?

15 PROVOST GARIBALDI: Well, I would say that
16 we are doing an excellent job. I don't --

17 CHAIRPERSON BERRY: You don't know what
18 the research shows? I just wondered whether -- there
19 wa sa time in which the graduation rates were higher
20 in terms of entering students who were retained and
21 then graduated.

22 PROVOST GARIBALDI: Right. I don't think

1 that nationally that is the case. I think that
2 certainly among a number of historical black colleges,
3 our graduation rates are above 45 percent which is
4 very close to the national average of 50 percent. I
5 think the very fact that you take in students, and
6 lots of the historical black colleges take in
7 students, at levels that may not be comparable with,
8 let's say, an Ivy League group of institutions clearly
9 indicates that something happens there.

10 And I think that the best -- the best
11 result is the fact that far more of those students go
12 one to pursue graduate and professional school
13 opportunities than do students at the other
14 institutions where there are far more of those
15 students.

16 CHAIRPERSON BERRY: Let me try going back
17 down to the other end of the funnel, when the kids
18 come in, and everybody here has talked about how in
19 the third grade, I guess it is, or second grade, third
20 grade, or something, black boys start not doing well
21 in school and trying to figure out what -- Some of
22 the research I saw indicated that the main thing that

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS
1323 RHODE ISLAND AVE., N.W.
WASHINGTON, D.C. 20005-3701

1 happens is that they're bored. And that because of
2 whatever stage of development they happen --

3 In other words, that all the things that
4 were said here about the family may not change, if
5 they had a female head of household, or they were
6 poor, or whatever they were, that family situation is
7 still the same. That they still are going to the same
8 school. Okay? That basically they are going through
9 developmental stages and at that point they start
10 being -- have a certain kind of cognition and
11 awareness. And that whatever is going on in the
12 school is boring. I mean, boring in the sense that it
13 does not address either their perceptions, their
14 learning styles, or whatever it is, that whatever is
15 going on is boring. And so, therefore, they do other
16 stuff like play, or go to sleep, or something. Create
17 trouble or something like that.

18 And that basically, if you could get their
19 attention, I don't mean you personally anybody, but if
20 we could get their attention in the class and keep
21 them aware and interested, that we might do better.
22 I've seen something on that. But I also would ask on

1 that, if that is the case, then teachers, and we've
2 talked a lot about teachers and what they need to do
3 and how they need to be accountable, and so on.

4 But teachers in schools where we have
5 these youngsters that we're talking about in this
6 proceeding, poor young African American males in the
7 inner cities in those early grades, come in with
8 learning styles, according to Dr. Talbert-Johnson,
9 which are different from what many of the teachers
10 they encounter are used to. They don't have the kind
11 of disciplined behavior that these teachers would be
12 comfortable with or expect.

13 Couldn't it be argued that it's too much
14 to expect the teachers to be comfortable with it?
15 That if you go to a good private school, for example,
16 they expect students to behave. And if they don't
17 behave, they have them leave. They call up the
18 parents and say, your child does not belong in this
19 school.

20 And that perhaps there's a responsibility
21 on the part of the student and whatever parental
22 situation they have to tell them that you may have a

1 learning style that requires that you get up and walk
2 around, and be aggressive and tell people off, but
3 that when you go to school, you cannot do this. And
4 that the teacher should not be expected to put up with
5 people who say, well, it's just my learning style.
6 You know. And you've got to put up with it and maybe
7 you can teach me or not.

8 So, couldn't it be argued that there are
9 certain responsibilities that somebody, whether a
10 church, the community center, the parent at home or
11 the concerned black men, or somebody, should have told
12 little three year old Joe, third grade Joe, that this
13 is how you behave when you go to school? Because when
14 Joe goes -- I don't know, whether Joe goes to the
15 movies and tears up the seats and says he's bored with
16 whatever the picture, and talks during the movie -- I
17 take that back. I've seen some people talking during
18 the movie. So that does happen.

19 But, could it be argued again that here we
20 are indulging the student when in fact we ought to be
21 requiring more things and that the teacher's job would
22 be a lot easier if we could get them to adjust? I'd

1 throw that out and I have a lot of things to throw
2 out. You can answer whatever you want. If you don't,
3 I'll just keep talking.

4 PROVOST GARIBALDI: Well, I'll be quick on
5 a couple.

6 It could be that students are bored around
7 the third grade. I happen to believe that, and am
8 concerned, that there might be some assessment problem
9 here. I just think that it's too coincidental that so
10 many third grade African American boys who have been
11 in top reading groups all of a sudden find themselves
12 at the lower end. I don't think that those kinds of
13 things happen. I think that that's a place where
14 teachers have to be much, much more conscious of
15 really what is going on at that particular point.

16 In the same way that teachers have to be
17 very, very much aware of all of these different
18 learning styles. One of our late professors at
19 Howard, Curtis Banks, talked extensively for the last
20 20 years about this learning style which he associated
21 with many African American students called VERV. And
22 VERV primarily stood for energy. And it just talked

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS
1323 RHODE ISLAND AVE., N.W.
WASHINGTON, D.C. 20005-3701

1 about how many African American students tend to be
2 much more engaged in the learning process.

3 Well, to be engaged in the learning
4 process in a very active kind of way, if you've got a
5 teacher who is not very much aware of what you are
6 actually doing, you're likely to be suspended or
7 you're likely to be sent to the principal's office
8 when you're really showing your own earnestness and
9 enthusiasm for learning. I think those kinds of
10 things have to be talked about and communicated.

11 But that is a style. But I agree
12 wholeheartedly with you that students also have to
13 know how to behave in appropriate ways when they're in
14 classroom settings as well as when they're in other
15 kinds of settings. And in some instances, community
16 organizations, churches, and the like, have taken on
17 that role and are trying to communicate that message
18 to young people as well.

19 PROFESSOR TALBERT-JOHNSON: And we would
20 like for all students to come to school prepared and
21 able to function within any environment but that's not
22 always the case. And so, if they don't have those

1 skills, it requires that that educator assume that
2 responsibility.

3 I think a key issue, as I alluded to in my
4 paper, is the way that we train these prospective
5 teachers. And it's not just providing or just
6 teaching subject matter. It's also managing those
7 individuals, all individuals that you instruct. And
8 you're not just working with a majority group of
9 individuals. You may also have some children who have
10 special needs, special disabilities, in that general
11 ed environment. So, we have to ensure that they have
12 an arsenal of skills to address the unique needs of
13 all of those individuals.

14 So, I think for me one of the key concerns
15 has to do with this whole topic of multi-cultural
16 education. You know, in the early '80s, that was the
17 buzz word, multi-cultural education. If we provide
18 these teachers with a course in multi-cultural
19 education or diversity, they will be able to work with
20 these individuals. Well, we're just learning now that
21 that's not true. There is something that we've missed
22 that we still have to address these types of issues in

1 1999. Something still is awry.

2 CHAIRPERSON BERRY: Teachers, getting more
3 and better teachers, and getting teachers that can
4 deal with the students, you talked about the shortage
5 of minority teachers, African American teachers.
6 Isn't one of the reasons why there's a shortage, one
7 is that there are people going into other fields.

8 The other is that teacher education
9 standards programs and tests to get into them have
10 been tightened, isn't that correct, in most states?
11 And in fact, they're being tightened further. And
12 there's an even greater reliance on standardized tests
13 and the like to determine whether people can even
14 become teachers, can get into the field, get admitted.

15 So, let's talk a little bit about the
16 testing, the measurement mystic, Dr. Johnson. I read
17 your paper and you have a section in it called -- in
18 which you said that test item content can be a source
19 of bias, particularly for urban and low income young
20 African Americans.

21 And you talk -- you cite some of the
22 research, including your own, about exposure to and

1 unfamiliarity with material, and items and the way
2 they're developed, and the way tests are given, and
3 the setting in which they're given. And the
4 psychological characteristics. And there's a whole
5 section that you have here.

6 Why is it that we rely on standardized
7 tests to determine whether people can have educational
8 opportunities?

9 DR. JOHNSON: Well, I think we -- it's
10 sort of like a magic bullet. We have this great faith
11 in standardized tests. We think numbers are just
12 great and it's terrific to be able to have these tests
13 because it seems like they do it so cleanly and so
14 neatly. Well, tests are very useful but the idea that
15 if a test is useful, then a little higher score means
16 even more of that criterion. And then the higher --
17 there's a point of diminishing returns and you don't--
18 just going higher and higher on the scale doesn't
19 necessarily get you more.

20 I did a study several years ago on medical
21 school graduates and applicants, and found that at
22 that point, those who were applying, that the mean of

1 the rejected students was higher than the mean of
2 practicing physicians because the scale had just kept
3 going up, and up, and up, and up, and up. And so,
4 tests are very useful. But just because you've got a
5 useful instrument doesn't mean necessarily if you
6 raise the cutting point higher you're doing that much
7 better job of selection.

8 Teacher tests --

9 CHAIRPERSON BERRY: Doesn't most of the
10 research on standardized tests done by researchers who
11 are experts at testing indicate that standardized
12 tests and this increase of cut off scores because
13 people make higher test scores, that they're mainly
14 used as sorting devices? That's mainly what they're
15 used for.

16 DR. JOHNSON: That comes to -- that's what
17 tends to evolve when other factors are not examined.
18 Most institutions explore a variety of factors, grade
19 point average, the recommendations of students. And
20 there are a lot of aspects of -- you mentioned what I
21 had said about the test, the tester, and the testing
22 taking setting. These were all factors that do

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS
1323 RHODE ISLAND AVE., N.W.
WASHINGTON, D.C. 20005-3701

1 contribute to test score.

2 There was a report that I just read from
3 Educational Testing Service that indicated that -- it
4 was actually a report on omitted items, on students
5 leaving out questions on a test. But what they found
6 was that -- this was with the National Assessment of
7 Educational Progress, with NAEP, testing. That when
8 students were tested in more crowded conditions, kind
9 of crunched up together, there were more omissions of
10 items and lower scores. Whereas, when they had
11 separate desks and little more space around their
12 tables, they did a lot better.

13 And this is -- it makes a certain amount
14 of common sense, but it also -- it can make a fairly
15 sizable difference in a test score, especially when it
16 operates over a number of students.

17 CHAIRPERSON BERRY: The -- I read recently
18 in the New York Times magazine which, of course, is
19 not a research journal, an article about people paying
20 money to tutors who would increase their standardized
21 test score. And I had earlier some years ago followed
22 the research on this subject and had concluded

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS
1323 RHODE ISLAND AVE., N.W.
WASHINGTON, D.C. 20005-3701

1 already, and I used to be on one of those advisory
2 boards in ETS, too. So I had followed all this
3 research, and it is my impression that it is the case
4 that if you pay that guy in the magazine \$10,000.00,
5 he can raise your test score, I think it was 400, 500
6 points. Are you familiar with this? Do you know what
7 I'm talking about?

8 DR. JOHNSON: Well, I'm familiar with the
9 test preparation programs, the Kaplans and the
10 Princeton Reviews, and that sort of thing. But I'm
11 not familiar with this particular tutor.

12 CHAIRPERSON BERRY: And I saw the
13 researcher from the educational -- No, a college
14 entrance exam board at a conference I was at a couple
15 of weeks ago who does research on this issue for the
16 college board. And she had seen the article and said
17 she knew that this guy did that and he would be able
18 to raise people's score. But her answer as to why it
19 was okay and why it was fair was that he was teaching
20 them something while he was helping to raise the
21 score. So, it wasn't like they weren't learning
22 anything while it was being raised.

1 DR. JOHNSON: Yes, we did a study a few
2 years ago with the NAACP in New York, Atlanta, and San
3 Francisco. I did it with a group of my students at
4 Howard. And the students, these were low income
5 students from high schools in these three urban areas.
6 Their test scores improved significant on the SAT.
7 They finished more questions. They answered more
8 questions after they had the program.

9 But they had had 40 hours of instruction
10 in mathematics, in English, and also some -- a couple
11 of sessions that had to do with how they saw
12 themselves as learners, how -- and some tips on test
13 taking.

14 So, they did develop stronger skills and
15 they also, we believe, developed more of a sense of
16 themselves as successful people. That's essential and
17 that's what so many of these interventions sort of
18 hook into is how much the individual sees themselves
19 as an effective and positive learner. Because without
20 that piece, it becomes difficult to succeed. And if
21 there are cues that degrade that piece, it's so much
22 the worse.

1 CHAIRPERSON BERRY: Well, if there are
2 indeed programs that can raise test scores by having
3 people pay money to do so, and the test scores are
4 used to determine who gets into certain institutions,
5 and therefore who then gets a good job, and therefore
6 then who gets more money, and more status, and more
7 opportunity in society, wouldn't it make sense that
8 everyone would have access to someone paying money to
9 have them.

10 Every child would be able to get that and
11 the poor young African Americans in the inner cities
12 might have access to such opportunity. That otherwise
13 one should not label them as incapable performing when
14 they don't have that. I mean, that's the case. What
15 do you think about that?

16 DR. JOHNSON: Well, I think that a good
17 program such as I think was being done, the program
18 that I described to you, students were actually
19 learning. They knew more math. They knew more
20 English. And therefore, they did better on the test.

21 CHAIRPERSON BERRY: Well, that's fine.
22 How about making that available to everybody?

1 DR. JOHNSON: Well, I think that programs
2 like that should be widely available.

3 CHAIRPERSON BERRY: Right. And if they're
4 not available, then how can one exclude people from
5 opportunity just because they don't have access to a
6 program like that?

7 DR. JOHNSON: But I think that those are
8 supplementary to an overall program of learning. That
9 is, a student should have a solid high school program
10 because that's what advances their test score more
11 than a test preparation program. Students who take
12 the PSAT do almost 50 points better than students who
13 did. Students who have five years of -- 20 years of
14 study of solid subjects such as four years of math,
15 science, English, social studies, foreign language, do
16 much better than students who haven't had that
17 preparation.

18 The best preparation for these variety of
19 college entrance tests is a very strong high school
20 program. It's better both in terms of preparing them
21 to take the SAT as well as preparing them for the
22 experience of college. Because it's not just that we

1 want them to get in, we want them to be successful and
2 to move on through the college experience, and to be
3 able to get out.

4 And I think that probably a good many of
5 those test prep programs essentially help to focus
6 students more on what they're doing more than anything
7 else.

8 CHAIRPERSON BERRY: Well, isn't it the
9 case that most of the students that we're talking
10 about in this particular proceeding, poor young
11 African American males in the inner city, attend
12 schools where it is less likely that they would have,
13 one, the best teachers. Because usually in school
14 systems, they put the best teachers in the best
15 schools, not the worse school, right. That's what the
16 research I've seen shows.

17 Secondly, isn't it also the case that they
18 are less likely to have a full range of curricular
19 opportunities in their school than being more likely
20 to have a full range of curricular opportunities in
21 their school. So that all of the things that we would
22 say -- and that they're less likely to take PSATs

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 rather than more likely to take PSATs. And in fact,
2 most of them may not know anything about a PSAT, what
3 it is. Isn't that, I mean, all the research that I've
4 seen indicates that that's the problem.

5 DR. JOHNSON: Well, more -- every more and
6 more black students take the PSAT and the SAT. More--
7 not just more absolute numbers but more percentage
8 wise. So, more -- those numbers are going up. The
9 college board has a program that pays for the tests
10 for students who need that support.

11 CHAIRPERSON BERRY: Well, in the hearings
12 we've done, we went to Mississippi, did one. I've
13 been out to Compton, California, to the schools out
14 there, and I've been visiting schools all around the
15 country.

16 In California schools, I have research
17 materials that were given to me, data on the high
18 schools in California in communities where Latinos and
19 African Americans attend. And to be sure they didn't
20 have the same range of curricular opportunities,
21 advanced courses, to be sure they did not have
22 advanced placement courses, and to be sure they did

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS
1323 RHODE ISLAND AVE., N.W.
WASHINGTON, D.C. 20005-3701

1 not have high rates of people taking PSATs.

2 My only point is that when I said I was
3 depressed and confused, is that it seems like
4 everything we describe as opportunities people should
5 have, the particular folks we're focusing on are less
6 likely to have them, whatever sense of responsibility
7 or irresponsibility they might have personally.

8 And I guess I'm just saying that one
9 solution might be, among all the other things that we
10 might do, is to say that if we know that something
11 works, like if we know that it works to pay some money
12 to have some people get together and give you some
13 supplementary something or other, then we might offer
14 that to them, too. That was my only point.

15 DR. JOHNSON: Well, it's likely to be more
16 effective on top of a strong high school program than
17 without it.

18 CHAIRPERSON BERRY: Ah. Ah. So, the --
19 now you've got me even more depressed.

20 DR. JOHNSON: Yes.

21 CHAIRPERSON BERRY: Because not only can I
22 not do anything, I can't do anything because I can't

1 do anything.

2 No, I'm only -- you're not depressing me,
3 Dr. Johnson. The material is depressing.

4 VICE CHAIRPERSON REYNOSO: While you're
5 absolutely right that the most important part is basic
6 training so wherever you get in, you do well and
7 graduate. Nonetheless, certainly for the premiere
8 schools one or two points make a difference.

9 And it's too bad to make that depend on
10 whether or not you have that extra one or two, or
11 three thousand dollars to pay for that prep course.
12 Because I know that in the prestigious law schools,
13 just one point on the LSAT will make the difference to
14 whether you get in or don't get in.

15 It's a shame in a way but that's the
16 reality. And that one or two points could have
17 happened because of that extra thousand dollars or
18 whatever it costs nowadays to take that review course.

19 CHAIRPERSON BERRY: And we know, too,
20 don't we, Cruz, that all the students that I know, the
21 ones I know where I teach and so on, they all take
22 these courses, pay this money, their parents do to

1 have them take these courses before they taek -- they
2 wouldn't dare take a standardized test without having
3 done one of these courses that's supposed to help to
4 pump up your score. And I don't know -- I don't think
5 they're doing that just because they like to waste
6 money.

7 But anyway, this is a very difficult
8 subject and you've given us some questions, and some
9 answers, and some food for thought. And we just want
10 to thank you for coming before us today. Thank you
11 very much. It's been very helpful.

12 VICE CHAIRPERSON REYNOSO: Thank you very
13 much.

14 CHAIRPERSON BERRY: Now, if I can find my
15 piece of paper that tells me something. What does it
16 say?

17 That concludes the first day of this
18 consultation. As is customary, the record will remain
19 open for 30 days during which any of the panelists can
20 submit any written statements that will aid in our
21 interpretation of their statements. In addition, any
22 member of the public may submit any information

1 helpful to our proceedings.

2 We appreciate the participation of
3 everyone here today. We are recessed until tomorrow
4 and we will reconvene at 9:15 a.m. in this room, after
5 a short commission meeting. The commission will begin
6 at 8:00 a.m. tomorrow morning.

7 We stand in recess.

8 (Whereupon, at 3:38 p.m., the commission
9 was adjourned, to reconvene at 9:15 a.m. the following
10 day.)

CERTIFICATE

This is to certify that the foregoing transcript in the
matter of: CONSULTATION

Before: U.S. COMMISSION ON CIVIL RIGHTS

Date: APRIL 15, 1999

Place: WASHINGTON, D.C.

represents the full and complete proceedings of the
aforementioned matter, as reported and reduced to
typewriting.
